IMPORTANT SAFETY NOTICE

Proper service and repair is important to the safe, reliable operation of all Philips Consumer Electronics Company** Equipment. The service procedures recommended by Philips and described in this service manual are effective methods of performing service operations. Some of these service operations require the use of tools specially designed for the purpose. The special tools should be used when and as recommended.

It is important to note that this manual contains various **CAUTIONS** and **NOTICES** which should be carefully read in order to minimize the risk of personal injury to service personnel. The possibility exists that improper service methods may damage the equipment. It also is important to understand that these **CAUTIONS** and **NOTICES ARE NOT EXHAUSTIVE**. Philips could not possibly know, evaluate and advise the service trade of all conceivable ways in which service might be done, or of the possible hazardous consequences of each way. Consequently, Philips has not undertaken any such broad evaluation. Accordingly, a servicer who uses a service procedure or tool which is not recommended by Philips must first satisfy himself thoroughly that neither his safety nor the safe operation of the equipment will be jeopardized by the service method selected.

** Hereafter throughout this manual, Philips Consumer Electronics Company will be referred to as Philips.

WARNING

Critical components having special safety characteristics are identified with a  or "S" by the Ref. No. in the parts list and enclosed within a broken line* (where several critical components are grouped in one area) along with the safety symbol  on the schematics or exploded views. Use of substitute replacement parts which do not have the same specified safety characteristics may create shock, fire, or other hazards. Under no circumstances should the original design be modified or altered without written permission from Philips. Philips assumes no liability, express or implied, arising out of any unauthorized modification of design. Servicer assumes all liability.

* Broken Line _____

FIRE AND SHOCK HAZARD

1. Be sure all components are positioned in such a way as to avoid the possibility of adjacent component shorts. This is especially important on those chassis which are transported to and from the service shop.
2. Never release a repaired unit unless all protective devices such as insulators, barriers, covers, strain reliefs, and other hardware have been installed in accordance with the original design.
3. Soldering and wiring must be inspected to locate possible cold solder joints, solder splashes, sharp solder points, frayed leads, pinched leads, or damaged insulation (including the ac cord). Be certain to remove loose solder balls and all other loose foreign particles.
4. Check across-the-line components and other components for physical evidence of damage or deterioration and replace if necessary. Follow original layout, lead length, and dress.
5. No lead or component should touch a receiving tube or a resistor rated at 1 watt or more. Lead tension around protruding metal surfaces or edges must be avoided.
6. Critical components having special safety characteristics are identified with an 'S' by the Ref. No. in the parts list and enclosed within a broken line* (where several critical components are grouped in one area) along with the safety symbol  on the schematic diagrams and /or exploded views.
7. When servicing any unit, always use a separate isolation transformer for the chassis. Failure to use a separate isolation transformer may expose you to possible shock hazard, and may cause damage to servicing instruments.
8. Many electronic products use a polarized ac line cord (one wide pin on the plug). Defeating this safety feature may create a potential hazard to the servicer and the user. Extension cords which do not incorporate the polarizing feature should never be used.
9. After reassembly of the unit, always perform an ac leakage test or resistance test from the line cord to all exposed metal parts of the cabinet. Also, check all metal control shafts (with knobs removed), antenna terminals, handles, screws, etc., to be sure the unit may be safely operated without danger of electrical shock.

* **Broken line** ____ - ____ - ____ - ____

LEAKAGE CURRENT COLD CHECK

1. Unplug the ac line cord and connect a jumper between the two prongs of the plug.
2. Turn on the power switch.
3. Measure the resistance value between the jumpered ac plug and all exposed cabinet parts of the receiver, such as screw heads, antennas, and control shafts. When the exposed metallic part has a return path to the chassis, the reading should be between 1 megohm and 5.2 megohms. When the exposed metal does not have a return path to the chassis, the reading must be infinity. Remove the jumper from the ac line cord.

LEAKAGE CURRENT HOT CHECK

1. Do not use an isolation transformer for this test. Plug the completely reassembled receiver directly into the ac outlet.
2. Connect a 1.5k, 10W resistor paralleled by a 0.15uF. capacitor between each exposed metallic cabinet part and a good earth ground such as a water pipe, as shown below.
3. Use an ac voltmeter with at least 5000 ohms/volt sensitivity to measure the potential across the resistor.
4. The potential at any point should not exceed 0.75 volts. A leakage current tester may be used to make this test; leakage current must not exceed 0.5mA. If a measurement is outside of the specified limits, there is a possibility of shock hazard. The receiver should be repaired and rechecked before returning it to the customer.
5. Repeat the above procedure with the ac plug reversed. (Note: An ac adapter is necessary when a polarized plug is used. Do not defeat the polarizing feature of the plug.)

OR

With the instrument completely reassembled, plug the ac line cord directly into a 120Vac outlet. (Do not use an isolation transformer during this test.) Use a leakage current tester or a metering system that complies with American National Standards Institute (ANSI) C101.1 Leakage Current for Appliances and Underwriters Laboratories (UL) 1410, (50.7). With the instrument ac switch first in the on position and then in the off position, measure from a known earth ground (metal water pipe, conduit, etc.) to all exposed metal parts of the instrument (antennas, handle brackets, metal cabinet, screw heads, metallic overlays, control shafts, etc.), especially any exposed metal parts that offer an electrical return path to the chassis. Any current measured must not exceed 0.5mA. Reverse the instrument power cord plug in the outlet and repeat the test. See the graphic below.

TV SAFETY NOTES

SAFETY CHECKS

After the original service problem has been corrected, a complete safety check should be made. Be sure to check over the entire set, not just the areas where you have worked. Some previous servicer may have left an unsafe condition, which could be unknowingly passed on to your customer. Be sure to check all of the following:

- Fire and Shock Hazard
- Implosion
- X-Radiation
- Leakage Current Cold Check
- Leakage Current Hot Check
- Picture Tube Replacement
- Parts Replacement

WARNING: Before removing the CRT anode cap, turn the unit OFF and short the HIGH VOLTAGE to the CRT DAG ground.

SERVICE NOTE: The CRT DAG is not at chassis ground.

IMPLOSION

1. All picture tubes used in current model receivers are equipped with an integral implosion system. Care should always be used, and safety glasses worn, whenever handling any picture tube. Avoid scratching or otherwise damaging the picture tube during installation.
2. Use only replacement tubes specified by the manufacturer.

X-RADIATION

1. Be sure procedures and instructions to all your service personnel cover the subject of X-radiation. Potential sources of X-rays in TV receivers are the picture tube and the high voltage circuits. The basic precaution which must be exercised is to keep the high voltage at the factory recommended level.
2. To avoid possible exposure to X-radiation and electrical shock, only the manufacturer's specified anode connectors must be used.
3. It is essential that the service technician has an accurate HV meter available at all times. The calibration of this meter should be checked periodically against a reference standard.
4. When the HV circuitry is operating properly there is no possibility of an X-radiation problem. High voltage should always be kept at the manufacturer's rated value - no higher - for optimum performance. Every time a color set is serviced, the brightness should be run up and down while monitoring the HV with a meter to be certain that the HV is regulated correctly and does not exceed the specified value. We suggest that you and your technicians review test procedures so that HV and HV regulation are always checked as a standard servicing procedure, and the reason for this prudent routine is clearly understood by everyone. It is important to use an accurate and reliable HV meter. It is recommended that the HV reading be recorded on each customer's invoice, which will demonstrate a proper concern for the customer's safety.

5. When troubleshooting and making test measurements in a receiver with a problem of excessive high voltage, reduce the line voltage by means of a Variac to bring the HV into acceptable limits while troubleshooting. Do not operate the chassis longer than necessary to locate the cause of the excessive HV.
6. New picture tubes are specifically designed to withstand higher operating voltages without creating undesirable X-radiation. It is strongly recommended that any shop test fixture which is to be used with the new higher voltage chassis be equipped with one of the new type tubes designed for this service. Addition of a permanently connected HV meter to the shop test fixture is advisable. The CRT types used in these new sets should never be replaced with any other types, as this may result in excessive X-radiation.
7. It is essential to use the specified picture tube to avoid a possible X-radiation problem.
8. Most TV receivers contain some type of emergency "Hold Down" circuit to prevent HV from rising to excessive levels in the presence of a failure mode. These various circuits should be understood by all technicians servicing them, especially since many hold down circuits are inoperative as long as the receiver performs normally.

PICTURE TUBE REPLACEMENT

The primary source of X-radiation in this television receiver is the picture tube. The picture tube utilized in this chassis is specially constructed to limit X-radiation emissions. For continued X-radiation protection, the replacement tube must be the same type as the original, including suffix letter, or a Philips approved type.

PARTS REPLACEMENT

Many electrical and mechanical parts in Philips television sets have special safety related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. The use of a substitute part which does not have the same safety characteristics as the Philips recommended replacement part shown in this service manual may create shock, fire, or other hazards.

PRODUCT SAFETY GUIDELINES FOR ALL PRODUCTS

CAUTION: Do not modify any circuit. Service work should be performed only after you are thoroughly familiar with all of the following safety checks. Risk of potential hazards and injury to the user increases if safety checks are not adhered to.

USE A SEPARATE ISOLATION TRANSFORMER FOR THIS UNIT WHEN SERVICING.

PREVENTION OF ELECTROSTATIC DISCHARGE (ESD)

Some semiconductor solid state devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by electrostatic discharge (ESD).

1. Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any ESD on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging ESD wrist strap, which should be removed for potential shock reasons prior to applying power to the unit under test.
2. After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
3. Use only a grounded-tip soldering iron to solder or unsolder ES devices.
4. Use only an anti-static solder removal device. Some solder removal devices not classified as "antistatic (ESD protected)" can generate an electrical charge sufficient to damage ES devices.
5. Do not use Freon propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
6. Do not remove a replacement ES device from its protective package until immediately before you are ready to install it (most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
7. Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.

CAUTION: Be sure no power is applied to the chassis or circuit and observe all other safety precautions.

8. Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your feet from a carpeted floor can generate static electricity (ESD) sufficient to damage an ES device.)

NOTE to CATV system Installer:

This reminder is provided to call the CATV system installer's attention to article 820-22 of the NEC that provides guidelines for proper grounding and, in particular, specifies that the cable ground shall be connected to the grounding system of the building, as close to the point of cable entry as practical.

PRACTICAL SERVICE PRECAUTIONS

IT MAKES SENSE TO AVOID EXPOSURE TO ELECTRICAL SHOCK. While some sources are expected to have a possible dangerous impact, others of quite high potential are of limited current and are sometimes held in less regard.

ALWAYS RESPECT VOLTAGES. While some may not be dangerous in themselves, they can cause unexpected reactions – reactions that are best avoided. Before reaching into the powered color TV set, it is best to test the high voltage insulation. It is easy to do, and is just a good service precaution.

BEFORE POWERING UP THE TV WITH THE BACK OFF (or on a test fixture), attach a clip lead to the CRT DAG ground and to a screwdriver blade that has a well insulated handle. After the TV is powered on and high voltage has developed, probe the anode lead with the blade, starting at the bottom of the High Voltage Transformer (flyback – IFT). Move the blade to within two inches of the connector of the CRT. **IF THERE IS AN ARC, YOU FOUND IT THE EASY WAY, WITHOUT GETTING A SHOCK!** If there is an arc to the screwdriver blade, replace the High Voltage Transformer or the lead, (if removable) whichever is causing the problem.

PICTURE TUBE REPLACEMENT PROCEDURE

Note: a. Two (2) people are required to handle this picture tube.
b. Safety Glasses must be worn during this procedure or whenever directly handling a picture tube.
c. Take care in each step not to damage the CRT or the cabinet.

1. Remove the Chassis and the CRT Socket Board Module from the cabinet.
2. A furniture pad or blanket should be positioned on the floor to support only the CRT Face. This pad or blanket should be high enough to keep the CRT Face approximately 12 to 14 inches off the floor.
3. Using two people, place the cabinet in a front down position with the CRT Face on the pad or blanket.
4. Place padded blocks under each corner of the cabinet to keep it from rocking.
5. Remove the four screws, at the corners of the CRT.
6. With two people lowering the cabinet to the floor, leave the CRT elevated by the pad or blanket.

Note: Take care not to grasp the neck of the CRT during this procedure, as it is extremely fragile.

7. Two (2) people may then lift the CRT from the cabinet.
8. Remove the degaussing coil from the defective CRT and mount on the replacement. Take care to maintain the exact shape and fit.

To install the new CRT, reverse steps 1 to 7.

Technical Specifications and Connections

Note: Described specifications are valid for the *whole* product range.

Technical Specifications

Reception

| Feature | Data |
|--------------------|------------------------------|
| Tuning system | : PLL |
| Color systems | : NTSC M/N |
| Sound systems | : BTSC non-DBX : BTSC DBX |
| Channel selections | : 181, full cable |
| IF picture carrier | : 45.75 MHz |

Mechanical Instructions

Index of this chapter:

1. Set Disassembly
2. Service Positions
3. Assembly/Board Removal
4. Set Re-assembly

Note: Figures below may deviate slightly from the actual product, due to different set designs.

Set Disassembly

1. Remove all screws from the back cover (do not forget the screws that hold the rear connection panel).
2. Pull the back cover backward to remove it.

Service Positions

There are 2 service positions possible.

Family Board without bracket (with integrated 'control').

1. Disconnect the strain relief of the AC power cord.
2. Remove the mono carrier, by pushing the two center clips outward [1]. At the same time pull the panel away from the CRT [2].
3. Disconnect the degaussing coil by removing the cable from (red) connector 0212.
4. Turn the panel 90 degrees counter clockwise [3].
5. Flip the panel 90 degrees [4], with the components toward the CRT.
6. Turn the panel with its rear connections toward the CRT [5].
7. Slide the metal heatsink (near the mains transformer 5520) underneath the right chassis bracket. This secures the panel [6].

Figure: Service position (1)

Family Board with bracket (with separate 'control').

1. Disconnect the strain relief of the AC power cord.
2. Disconnect the degaussing coil by removing the cable from (red) connector 0212 [1].
3. Remove the panel bracket from the bottom tray, by pulling it backward [2].
4. Turn the chassis tray 90 degrees counter clockwise.
5. Move the panel to the left and flip it 90 degrees [3], with the components toward the CRT.
6. Turn the panel with the rear jack panel toward the CRT.
7. Place the hook of the tray in the hole in the cabinet bottom [4] and slide the panel backward to lock it in the service position.

Figure: Service position (2)

Assembly/Board Removal

Comb Filter Assembly/Board (if present)

You can remove the Comb Filter panel from the family board by disconnecting it from connector 1810 (located at the top of the AC power transformer 5520).

Top Control Assembly/Board (if present)

Figure: Top control removal

1. Remove the two screws (if present).
2. Pull the module down and backward (release it from the front hinge [M]).
3. Lift the board from its bracket while releasing the two fixation clamps. The board hinges on the other side.

Front Interface Assembly/Board (if present)

Figure: Front interface removal

1. You can remove the complete module from the bottom plate, by pulling the two clamps upward [1] while sliding the module away from the CRT [2].
2. Release the 2 clamps [3] at the side of the bracket, and lift the board out of the bracket (it hinges at one side).

DAF Assembly/Board (if present)

Figure: DAF panel removal

1. You can remove the complete module from the family board bracket, by pressing the clamp downward [1] while sliding the module toward the CRT [2].
2. Release the 2 clamps [3] to lift the board out of the bracket [4].

Side Jack Panel Assembly/Board (if present)

Figure: Side jack panel removal

1. You can remove the complete side jack panel assembly by removing the 2 screws.
2. Release the 2 clamps to lift the board out of the bracket.

Set Re-assembly

Before replacing the back cover, check the following:

1. Be sure the AC power cord is mounted correctly in its guiding brackets.
2. Re-place the strain relief for the AC power cord into the cabinet.
3. Be sure all cables are returned to their original positions.

Service Modes, Error Codes and Fault Finding

Index:

1. Supporting Overviews
2. Test Points.
3. Service Modes.
4. Problems and Solving Tips (related to CSM).
5. ComPair.
6. Error Codes.
7. The Blinking LED Procedure.
8. Protections.
9. Repair Tips.

Supporting Overviews

- [Block Diagram](#)
- [I2C and Supply Voltage Diagram](#)
- [Test point Overview Mono Carrier](#)
- [Test point Overview CRT panel](#)

Test Points

The chassis is equipped with test points printed on the circuit board assemblies. These test points refer to the functional blocks:

Table: Test point overview

| Test point | Circuit | Diagram |
|---------------|------------------------|--------------|
| A1-A2-A3-.... | Audio processing | A8, A9 / A11 |
| C1-C2-C3-.... | Control | A7 |
| F1-F2-F3-.... | Frame drive and output | A3 |
| I1-I2-I3-.... | Tuner & IF | A4 |
| L1-L2-L3-... | Line drive and output | A2 |
| P1-P2-P3-.... | Power supply | A1 |
| S1-S2-S3-.... | Synchronization | A6 |
| V1-V2-V3-.... | Video processing | A5, B1 |

The numbering is in a logical sequence for diagnostics. Always start diagnosing within a functional block in the sequence of the relevant test points for that block.

Perform measurements under the following conditions:

- Television set in Service Default Alignment Mode.
- Video input: Color bar signal.
- Audio input: 3 kHz left channel, 1 kHz right channel.

Service Modes

Service Default Alignment Mode (SDAM) offers several features for the service technician, while the Customer Service Mode (CSM) is used for communication between the servicer and the customer.

The L01.1U AC chassis also offers the option of using ComPair, a hardware interface between a computer and the TV chassis. It offers the abilities of structured troubleshooting, error code reading, and software version readout for all L01.1U AC chassis.

Minimum requirements for ComPair: a Pentium processor, a Windows OS, and a CD-ROM drive (see also "ComPair" section).

Table: Software cluster overview

| SW Cluster | SW name | UOC type | UOC Diversity | Special Features |
|---|-----------|----------|---------------|-------------------------|
| L3LUS1 | L01US2x.y | TDA9587 | 64K ROM Size | Stereo dBx, Comb Filter |
| L3LUN1 | L01UN4x.y | TDA9588 | 64K ROM Size | Stereo non-dBx |
| L3LUN2 | L01UN5x.y | TDA9577 | 55K ROM Size | Stereo non-dBx |
| Abbreviations in Software name: U = USA (NAFTA), M = Mono, N = Stereo non-dBx and S = Stereo dBx. | | | | |

Service Default Alignment Mode (SDAM)

Purpose

- To create a predefined setting for measurements to be made.
- To override software protections.
- To start the blinking LED procedure.
- To change option settings.
- To display / clear the error code buffer.
- To perform alignments.

Specifications

- Tuning frequency: 61.25 MHz (channel 3).
- Color system: NTSC M.
- All picture settings at 50% (brightness, color contrast, hue).
- Bass, treble and balance at 50 %; volume at 25 %.
- All service-unfriendly modes (if present) are disabled. The service unfriendly modes are:
 - Timer / Sleep timer.
 - Child / parental lock.
 - Blue mute.
 - Hotel / hospital mode.
 - Auto shut off (when no 'IDENT' video signal is received for 15 minutes).
 - Skipping of non-favorite presets / channels.
 - Auto-storage of personal presets.
 - Auto user menu time-out.
 - Auto Volume Leveling (AVL).
- Run timer (maximum four digits displayed)

- ### How to enter

- Press the following key sequence on the remote control transmitter: **'0 6 2 5 9 6'** directly followed by the **'MENU'** button (do not allow the display to time out between entries while keying the sequence).
- Short jumper wires 9631 and 9641 on the family board (see Fig. 8-1) and apply AC power. Then press the power button (remove the short after start-up).

- Or via ComPair (with the ComPair 'Tools' RC7150 Service Remote, it should be possible to enter SDAM via the ComPair interface).

Menu explanation

1. **LLLL**. This represents the run timer. The run timer counts normal operation hours, but does not count standby hours (maximum four digits displayed).
2. **AAABCD-X.Y**. This is the software identification of the main microprocessor:
 - **A** = the project name (L01).
 - **B** = the region: E= Europe, A= Asia Pacific, U= NAFTA, L= LATAM.
 - **C** = the software diversity:
 - **Europe**: T = 1 page TXT, F = Full TXT, V = Voice control
 - **LATAM and NAFTA**: N = Stereo non-dBx, S = Stereo dBx
 - **Asian Pacific**: T = TXT, N = non TXT, C = NTSC
 - **ALL regions**: M = mono, D = DVD, Q = Mk2
 - **D** = the language cluster number:
 - **X** = the main software version number (updated with a major change that is incompatible with previous versions)
 - **Y** = the sub software version number (updated with a minor change that is compatible with previous versions)
3. **S**. Indication of the service mode (S = SDAM = Service Default Alignment Mode).
4. **Error Buffer**. Shows all errors detected since the last time the buffer was erased. Five errors possible.
5. **Option Bytes**. Used to set the option bytes. See 'Options' in the Alignments section for a detailed description. Seven codes possible.
6. **Clear**. Erases the contents of the error buffer. Select the CLEAR menu item and press the MENU RIGHT key. The content of the error buffer is cleared.
7. **Options**. Used to set the option bits. See 'Options' in the Alignments section for a detailed description.
8. **AKB**. Used to disable (0) or enable (1) the 'black current loop' (AKB = Auto Kine Bias).
9. **Tuner**. Used to align the tuner. See 'Tuner' in the Alignments section for a detailed description.

10. **White Tone.** Used to align the white tone. See 'White Tone' in the Alignments section for a detailed description.
11. **Geometry.** Used to align the geometry settings of the television. See 'Geometry' in the Alignments section for a detailed description.
12. **Audio.** No audio alignment is necessary for this television set.

How to navigate

- In SDAM, select menu items with the MENU UP/DOWN keys on the remote control transmitter. The selected item will be highlighted. When not all menu items fit on the screen, use the MENU UP/DOWN keys to display the next / previous menu items.
- With the MENU LEFT/RIGHT keys, it is possible to:
 - Activate the selected menu item.
 - Change the value of the selected menu item.
 - Activate the selected submenu.
- In SDAM, when you press the MENU button, the set will switch to the normal user menus (with the SDAM mode still active in the background). To return to the SDAM menu press the STATUS/EXIT button.
- When you press the MENU key in while in an SDAM submenu, you will return to the previous menu.
- In SDAM, press the STATUS/EXIT button to toggle the OSD (except the S which indicates SDAM) on and off, to prevent the OSD from interfering with measurements.

How to store SDAM settings

To store settings changed in SDAM leave the top level SDAM menu by using the POWER button on the remote control transmitter or the television set.

How to exit

Switch the set to STANDBY by pressing the POWER button on the remote control transmitter or the television set.

If you turn the television set off by removing the AC power (i.e., unplugging the television) without using the POWER button, the television set will remain in SDAM when AC power is re-applied, and the error buffer is not cleared.

Customer Service Mode (CSM)

Purpose

The Customer Service Mode shows error codes and information on the TV operation settings. The servicer can instruct the customer to enter CSM by telephone and read off the information displayed. This helps the servicer to diagnose problems and failures in the TV set before making a service call.

The CSM is a read-only mode; therefore, modifications are not possible in this mode.

How to enter

To enter CSM, press the following key sequence on the remote control transmitter: '**1 2 3 6 5 4**' (do not allow the display to time out between entries while keying the sequence).

Upon entering the Customer Service Mode, the following screen will appear:

Figure: CSM menu

Menu explanation

1. Indication of the service mode (CSM = Customer Service Mode).
2. Reserved item.
3. Software identification of the main microprocessor (see 'Service Default Alignment Mode' for an explanation)
4. Reserved item for P3C call centers (**AKBS** stands for **A** dvanced **K** nowledge **B** ase **S** ystems).
5. Indicates the type of TV system or whether or not the television is receiving an 'IDENT' signal on the selected source. If no 'IDENT' signal is detected, the display will read 'NOT TUNED'
6. Displays the last five errors detected in the error code buffer.

How to exit

To exit CSM, use one of the following methods:

- Press the MENU, STATUS/EXIT, or POWER button on the remote control transmitter.
- Press the POWER button on the television set.

iTV/Commercial Model Service Modes

Unlike mainstream L01.1U AC models, commercial L01.1U AC models do not use the Service Default Alignment Mode. Commercial Models use the Service Default Mode (SDM) and Service Alignment Mode (SAM).

Service Alignment Mode (SAM) and Service Default Mode (SDM) offer several features for the service technician.

To enter the SAM and SDM modes in iTV/commercial models, you must use a Philips ITV commercial setup transmitter, such as the RC2573GR or the RG4172BK). Part numbers for two common Philips ITV setup remotes are:

RC2573GR : part number 4835 310 57554

RG4172BK : part number 3121 247 91041

Service Alignment Mode (SAM)

Purpose

- To perform (software) alignments.

Specifications

- Software alignments

How to enter

To enter SAM, you must use a Philips ITV commercial setup transmitter (such as the RC2573GR or the RG4172BK). Use the following method to enter SAM:

- First, place the setup remote in setup mode. To place the RG4172BK in setup mode, press TV SETUP; to place the RC2573GR in setup mode, set the switch

to the TV SETUP position. Then press the following key sequence on the remote control transmitter: '0 6 2 5 9 6' directly followed by the '**RECALL**' button (do not allow the display to time out between entries while keying the sequence).

After entering SAM, a special menu screen is visible, with SAM in the upper right corner of the screen to indicate that the television is in Service Alignment Mode.

SAM mode allows the servicer to perform all of the software alignments performed in the SDAM mode in mainstream models.

How to navigate in SAM

- In SAM, select menu items with the MENU UP/DOWN keys on the remote control transmitter. The selected item will be highlighted. When not all menu items fit on the screen, use the MENU UP/DOWN keys to display the next / previous menu items.
- With the MENU LEFT/RIGHT keys, it is possible to:
 - Activate the selected menu item.
 - Change the value of the selected menu item.
 - Activate the selected submenu.
- In SAM, when you press the MENU button, the set will switch to the normal user menus (with the SAM mode still active in the background). To return to the SAM menu press the RECALL button.
- When you press the MENU key in while in an SAM submenu, you will return to the previous menu.

How to store SAM settings

To store settings changed in SAM leave the top level SAM menu by using the POWER button on the remote control transmitter or the television set.

How to exit SAM

Switch the set to STANDBY by pressing the POWER button on the remote control transmitter or the television set.

If you turn the television set off by removing the AC power (i.e., unplugging the television) without using the POWER button, the television set will remain in SAM when AC power is reapplied.

Service Default Mode (SDM)

Purpose

- To create a predefined setting for measurements to be made.
- To override software protections.
- To start the blinking LED procedure.
- To change option settings.
- To display the error code buffer.

Specifications

- Tuning frequency: 61.25 MHz (channel 3).
- Color system: NTSC M.
- All picture settings at 50% (brightness, color contrast, hue).
- Bass, treble and balance at 50 %; volume at 25 %.

- All service-unfriendly modes (if present) are disabled. The service unfriendly modes are:
 - Timer / Sleep timer.
 - Child / parental lock.
 - Blue mute.
 - Auto shut off (when no 'IDENT' video signal is received for 15 minutes).
 - Skipping of non-favorite presets / channels.
 - Auto-storage of personal presets.
 - Auto user menu time-out.
 - Auto Volume Leveling (AVL).
- Run timer (maximum four digits displayed)
- Software version
- Option settings
- Error buffer reading

How to enter

To enter SDM, you must use a Philips ITV commercial setup transmitter (such as the RC2573GR or the RG4172BK). Use the following method to enter SDM:

- First, place the setup remote in setup mode. To place the the RG4172BK in setup mode, press TV SETUP; to place the the RC2573GR in setup mode, set the switch to the TV SETUP position. Then press the following key sequence on the remote control transmitter: **'0 6 2 5 9 6'** directly followed by the **'MENU'** button (do not allow the display to time out between entries while keying the sequence).

After entering SDM, a special menu screen is visible, with SDM in the upper right corner of the screen to indicate that the television is in Service Default Mode.

SDM mode allows the servicer to perform all of the alignments, except software alignments, which are performed in the SDAM mode in mainstream models. In commercial models, software alignments are performed in SAM mode.

How to navigate

- In SDM, select menu items with the MENU UP/DOWN keys on the remote control transmitter. The selected item will be highlighted. When not all menu items fit on the screen, use the MENU UP/DOWN keys to display the next / previous menu items.
- With the MENU LEFT/RIGHT keys, it is possible to:
 - Activate the selected menu item or option.
 - Change the value of the selected menu item or option byte.
- In SDM, when you press the MENU button, the set will switch to the normal user menus (with the SDM mode still active in the background). To return to the SDM menu press the RECALL button.
- In SDM, press the RECALL button to toggle the OSD (except the SDM which indicates the set is in SDM mode) on and off, to prevent the OSD from interfering with measurements.

How to store SDM settings

To store settings changed in SDM leave the top level SDM menu by using the POWER button on the remote control transmitter or the television set.

How to exit

Switch the set to STANDBY by pressing the POWER button on the remote control transmitter or the television set.

If you turn the television set off by removing the AC power (i.e., unplugging the television) without using the POWER button, the television set will remain in SDM when AC power is reapplied, and the error buffer is not cleared.

Problems and Solving Tips Related to CSM

Picture Problems

Note : The problems described below are all related to the TV settings. The procedures used to change the value (or status) of the different settings are described.

Picture too dark or too bright

If:

- The picture improves when you have press the AUTO PICTURE button on the remote control transmitter, or
- The picture improves when you enter the Customer Service Mode

Then:

3. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.

4. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
5. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu (if necessary).
6. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
7. Use the MENU UP/DOWN keys (if necessary) to select BRIGHTNESS.
8. Press the MENU LEFT/RIGHT keys to increase or decrease the BRIGHTNESS value.
9. Use the MENU UP/DOWN keys to select PICTURE.
10. Press the MENU LEFT/RIGHT keys to increase or decrease the PICTURE value.
11. Press the MENU button on the remote control transmitter twice to exit the user menu.
12. The new PERSONAL preference values are automatically stored.

White line around picture elements and text

If:

The picture improves after you have pressed the AUTO PICTURE button on the remote control transmitter

Then:

13. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
14. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
15. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu (if necessary).
16. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.

17. Use the MENU UP/DOWN keys to select SHARPNESS.
18. Press the MENU LEFT key to decrease the SHARPNESS value.
19. Press the MENU button on the remote control transmitter twice to exit the user menu.
20. The new PERSONAL preference value is automatically stored.

Snowy picture

To enter CSM, press the following key sequence on the remote control transmitter: '**123654**' (do not allow the display to time out between entries while keying the sequence).

Check CSM line 5. If this line reads 'Not Tuned,' check the following:

- Antenna not connected. Connect the antenna.
- No antenna signal or bad antenna signal. Connect a proper antenna signal.
- The tuner is faulty (in this case line 6, the Error Buffer line, will contain error number 10). Check the tuner and replace/repair the tuner if necessary.

Black and white picture

If:

- The picture improves after you have pressed the AUTO PICTURE button on the remote control transmitter

Then:

25. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
26. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
27. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu (if necessary).
28. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
29. Use the MENU UP/DOWN keys to select COLOR.
30. Press the MENU RIGHT key to increase the COLOR value.
31. Press the MENU button on the remote control transmitter twice to exit the user menu.
32. The new PERSONAL preference value is automatically stored.

Menu text not sharp enough

If:

- The picture improves after you have pressed the AUTO PICTURE button on the remote control transmitter.

Then:

34. Press the AUTO PICTURE button on the remote control transmitter repeatedly (if necessary) to choose PERSONAL picture mode.
35. Press the MENU button on the remote control transmitter. This brings up the normal user menu.
36. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu (if necessary).

37. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
38. Use the MENU UP/DOWN keys to select PICTURE.
39. Press the MENU LEFT key to decrease the PICTURE value.
40. Press the MENU button on the remote control transmitter twice to exit the user menu.
41. The new PERSONAL preference value is automatically stored.

ComPair

Introduction

ComPair (Computer Aided Repair) is a service tool for Philips Consumer Electronics products. ComPair is a further development of the European DST (special remote control transmitter for Service), which allows faster and more accurate diagnostics. ComPair has three big advantages:

- ComPair helps you to get an understanding on how to repair the chassis in a short time, by guiding you systematically through the repair procedures.
- ComPair allows very detailed diagnostics (on I² C level) and is therefore capable of accurately indicating problem areas. You do not have to know anything about I² C commands yourself because ComPair takes care of this.
- ComPair speeds up the repair time since it can automatically communicate with the chassis (when the microprocessor is working) and all repair information is directly available. When ComPair is installed together with the Force electronic manual of the L01.1U AC chassis, schematics and CBAs are only a mouse-click away.

Specifications

ComPair consists of a Windows based faultfinding program and an interface box between PC and the product. The ComPair interface box is connected to the PC via a serial or RS232 cable.

In case of the L01 chassis, the ComPair interface box and the TV communicate via a bi-directional service cable via the service connector (connector 0267).

The ComPair faultfinding program is able to determine the problem of the television set. ComPair can gather diagnostic information in two ways:

- **Automatic** (by communication with the television): ComPair can automatically read the contents of the entire error buffer. Diagnosis is done on I² C level. ComPair can access the I² C bus of the television. ComPair can send and receive I² C commands to the microprocessor of the television. In this way, it is possible for ComPair to communicate (read and write) to devices on the I² C busses of the television set.
- **Manually** (by asking questions to the servicer): Automatic diagnosis is only possible if the microprocessor of the television is working correctly, and only to a certain extent. When this is not the case, ComPair will guide you through the faultfinding tree by asking you questions (for example; Does the screen give a picture? Click on the correct answer: YES / NO) and showing you examples (for example; Measure test-point I7 and click on the correct oscillogram you see on the oscilloscope). You can answer by clicking on a link (for example, text or a waveform picture) that will bring you to the next step in the faultfinding process.

By a combination of automatic diagnostics and an interactive question and answer procedure, ComPair will enable you to find most problems in a fast and effective way.

Beside fault finding, ComPair provides some **additional features** like:

- Uploading or downloading of presets.
- Management of preset lists.
- If both ComPair and the Force electronic service manual are installed, all the schematics and CBAs of the television set are available by clicking on the appropriate hyperlink.
- **Example:** *Measure the DC-voltage on capacitor C2568 (Schematic/Panel) at the family board.*
 - Click on the 'Panel' hyperlink to automatically show the CBA with a highlighted capacitor C2568.
 - Click on the 'Schematic' hyperlink to automatically show the electronic position of the highlighted capacitor.

How To Connect ComPair

51. First, install the ComPair Browser software on your PC (see the Quick Reference Card for installation instructions).
52. Connect the RS232 interface cable between a free serial (COM) port of your PC and the PC connector (marked with 'PC') of the ComPair interface.
53. Connect the AC power adapter to the supply connector (marked 'POWER 9V DC') on the ComPair interface.
54. Switch the ComPair interface 'off'.
55. Switch the television set 'off' (and remove the AC power).
56. Connect the ComPair interface cable between the connector on the rear side of the ComPair interface (marked 'I² C') and the ComPair connector on the family board (connector 0267).

57. Plug the AC power adapter in the AC power outlet and switch the ComPair interface 'on'. The green and red LEDs light up together. The red LED turns off after approximately 1 second, while the green LED remains lit.
58. Start the ComPair program and read the 'introduction' chapter.

Figure: ComPair connection

How To Order

ComPair order codes **for NAFTA** :

- ComPair Software: ST4191.
- ComPair Interface Box: 4822 727 21631.
- AC Adapter: T405-ND.
- ComPair Quick Start Guide: ST4190.
- ComPair interface cable: 3122 785 90004.

Error Codes

The error code buffer contains all errors detected since the last time the buffer was erased. The buffer is written from left to right. When an error occurs that is not yet in the error code buffer, it is displayed at the left side and all other errors shift one position to the right.

How To Read The Error Buffer

You can read the error buffer in 3 ways:

- On screen via the SDAM (if you have a picture). **Examples:**
 - ERROR: 0 0 0 0 0 : No errors detected
 - ERROR: 6 0 0 0 0 : Error code 6 is the last and only detected error
 - ERROR: 9 6 0 0 0 : Error code 6 was detected first and error code 9 is the last detected (newest) error
- Via the blinking LED procedure (when you have no picture). See 'The Blinking LED Procedure'.
- Via ComPair.

How To Clear The Error Buffer

The error code buffer is cleared in the following cases:

- By using the CLEAR command in the SDAM menu:
 - To enter SDAM, press the following key sequence on the remote control transmitter: '062596' directly followed by the 'MENU' button (do not allow the display to time out between entries while keying the sequence).

- Make sure the menu item CLEAR is highlighted. Use the MENU UP/DOWN buttons, if necessary.
- Press the MENU RIGHT button to clear the error buffer. The text on the right side of the 'CLEAR' line will change from 'CLEAR?' to 'CLEARED'
- If the contents of the error buffer have not changed for 50 hours, the error buffer resets automatically.

Note: If you exit SDAM by disconnecting the AC power from the television set, the error buffer is not reset.

Error Codes

In case of non-intermittent faults, write down the errors present in the error buffer and clear the error buffer before you begin the repair. This ensures that old error codes are no longer present.

If possible, check the entire contents of the error buffer. In some situations, an error code is only the result of another error and not the actual cause of the problem (for example, a fault in the protection detection circuitry can also lead to a protection).

Table: Error code overview

| Error | Device | Error description | Check item | Diagram |
|-------|----------------|---------------------------------|---------------------------------------|--------------------------|
| 0 | - | No Error | | |
| 1 | - | X-Ray Protection (USA) | 2465, 7460 | A2 |
| 2 | - | Horizontal Protection | 7460, 7461, 7462, 7463, 6467 | A2 |
| 3 | TDA8359TDA9302 | Vertical Protection | 7861, VlotAux +13v | A2, A3 |
| 4 | MSP34X5TDA9853 | MAP I 2 C identification error | 7831, 7861 | A9 or A11 |
| 5 | TDA95XX | POR 3.3V / 8V Protection | 7200, 7560, 7480 | A1, A2. A5, A6, A7 |
| 6 | I 2 C bus | General I 2 C bus error | 7200, 3624, 3625 | A7 |
| 7 | - | Power Down (over current) prot. | - | - |
| 8 | - | E/W Protection (Large Screen) | 7400, 3405, 3406, 3400 | A2 |

| Error | Device | Error description | Check item | Diagram |
|-------|------------|--------------------------------------|------------------------|------------|
| 9 | M24C08 | NVM I 2 C identification error | 7602, 3611, 3603, 3604 | A7 |
| 10 | Tuner | Tuner I 2 C identification error | 1000, 7482 | A2, A4 |
| 11 | TDA6107/8 | Black current loop protection | 7330, RGB amps, CRT | B1, B2 |
| 12 | M65669 | MAP I 2 C identification error (USA) | 7803 | P |
| 14 | DVD Loader | DVD I 2 C identification error | DVD Interface module | DVD Loader |

Note: Error 7 is not applicable.

The Blinking LED Procedure

Using this procedure, you can make the contents of the error buffer visible via the front LED. This is especially useful when there is no picture.

When the SDAM is entered, the LED will blink the contents of the error-buffer:

- 1-14 short blinks (indicates error number 1-14),
- When all the error-codes are displayed, the sequence finishes with an 'on' LED blink of 1.5 seconds,
- The sequence starts again.

Example of error buffer: **12 9 6 0 0**

After entering SDAM, the following occurs:

- 1 long 'on' blink of 5 seconds to start the sequence,
- 12 short blinks followed by a pause of 1.5 seconds,
- 9 short blinks followed by a pause of 1.5 seconds,
- 6 short blinks followed by a pause of 1.5 seconds,
- 1 long 'on' blink of 1.5 seconds to finish the sequence,
- The sequence starts again at 12 short blinks.

Protections

If a fault situation is detected, an error code will be generated; and, if necessary, the television set will go into protection mode. Blinking of the red LED at a frequency of 3 Hz indicates the protection mode. In some error cases, the microprocessor does not put the set in protection mode. The error codes of the error buffer and the blinking LED procedure can be read via the Service Default Alignment Menu (SDAM), or via ComPair.

To get a quick diagnosis the chassis has two service modes implemented:

- The Customer Service Mode (CSM).
- The Service Default Alignment Mode (SDAM).

For a detailed description, see the "Customer Service Mode" and "Service Default Alignment Mode" sections.

Repair Tips

Below some failure symptoms are given, followed by a repair tip.

- **Set is dead and makes hiccupping sound.** 'Main Power Supply' is available. Hiccupping stops when L5561 is de-soldered, meaning that problem is in the 'Main Power Supply' line. No output voltages at LOT, no horizontal deflection. Reason: line transistor 7460 is defective.
- **Set is dead, and makes no sound.** Check power supply IC 7520. Result: voltage at pins 1, 3, 4, 5 and 6 are about 180 V and pin 8 is 0 V. The reason why the voltage on these pins is so high is that the output driver (pin 6) has an open load. That is why MOSFET 7521 is not able to switch. Reason: feedback resistor 3523 is defective. **Caution** : Be careful measuring the gate of 7521: circuitry is very high ohmic and can easily be damaged!
- **Set is in hiccup mode and shuts down after 8 seconds.** The blinking LED (set is in SDAM mode) indicates error 5. As it is unlikely that the microprocessor 'POR' and '+8V protection' happen at the same time, measure the '+8V' supply. If this voltage is missing, check transistor 7480.
- **Set is in non-stop hiccup mode.** Set is in over-current mode; check the secondary sensing (opto coupler 7515) and the 'Main Power Supply' voltage. Signal 'Stdbby_con' must be logic low under normal operation conditions and goes to high (3.3 V) under standby and fault conditions.
- **Set turns on, but without picture and sound.** The screen shows snow, but OSD and other menus are okay. Blinking LED procedure indicates error 11, so problem is expected in the tuner (part reference number 1000). Check presence of supply voltages. 'Vlotaux+5V' voltages at pin 5 and 7 are okay; 'VT_supply' at pin 9 is missing. Conclusion: resistor 3460 is defective.

- **Set turns on, but with a half screen at the bottom. Sound is okay.** Blinking LED (set is in SDAM mode) indicates error 3. Check 'Vlotaux+11V' and '+50V'. If they are okay, problem is expected in the vertical amplifier IC 7471. Use an oscilloscope to measure the waveform on pin 17 of the UOC. Also, measure the waveform at pin 1 of IC 7471. If the signal there is missing, a defective resistor R3244 caused the problem.

Alignments

Index of this chapter:

1. General Alignment Conditions
2. Hardware Alignments
3. Software Alignments and Settings

Note: The Service Default Alignment Mode (SDAM) is described in the "Service Modes, Error Codes and Fault Finding" section. SDAM menu navigation is performed by using the MENU UP, MENU DOWN, MENU LEFT, and MENU RIGHT keys of the remote control transmitter.

General Alignment Conditions

Perform all electrical adjustments under the following conditions:

- AC voltage and frequency: 110 V ($\pm 10\%$), 60 Hz ($\pm 5\%$).
- Connect the television set to the AC power via an isolation transformer.
- Allow the television set to warm up for approximately 20 minutes.
- Measure the voltages and waveforms in relation to chassis ground (with the exception of the voltages on the primary side of the power supply). Never use heatsinks as ground.
- Test probe: $R_i > 10\text{ M}\Omega$; $C_i < 2.5\text{ pF}$.
- Use an isolated trimmer/screwdriver to perform the alignments.

Hardware Alignments

Figure: Family board (top view)

Vg2 Adjustment

1. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the **MENU** button (do not allow the display to time out between entries while keying the sequence).
2. Use the MENU UP/DOWN keys to highlight the WHITE TONE sub menu.
3. Press the MENU LEFT or MENU RIGHT key to enter the WHITE TONE sub menu.
4. In the WHITE TONE sub menu, press the MENU UP/DOWN keys to select NORMAL RED, NORMAL GREEN, or NORMAL BLUE.

5. Use the MENU LEFT/RIGHT keys to set the values of NORMAL RED, NORMAL GREEN and NORMAL BLUE to '40'.
6. Press the MENU button twice to enter the normal user menu.
7. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu (if necessary).
8. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
9. Use the MENU UP/DOWN keys to select PICTURE. Be sure to record the current value of PICTURE.
10. Use the MENU LEFT/RIGHT keys to set the value of PICTURE to '0'.
11. Use the MENU UP/DOWN keys to select BRIGHTNESS. Be sure to record the current value of BRIGHTNESS.
12. Use the MENU LEFT/RIGHT keys to set the value of BRIGHTNESS to minimum (OSD just visible in a dark room).
13. Press the MENU button twice to return to the top level SDAM menu.
14. Press the STATUS/EXIT button to hide the SDAM onscreen display.
15. Connect the RF output of a video pattern generator to the antenna input.
16. Input a 'black picture' test pattern to the television set.
17. Set the oscilloscope to 50 V/div and the time base to 0.2 milliseconds (external triggering on the vertical pulse).
18. Ground the scope at the CRT panel and connect a 10:1 probe to one of the cathodes of the picture tube socket (see schematic diagram B).
19. Measure the 'cut off pulse' during the first full line after the frame blanking (see Fig. 8-2). You will see two pulses, one being the 'cut off pulse' and the other being the 'white drive pulse'. Choose the one with the lowest value; this is the 'cut off pulse'.
20. Select the cathode with the highest VDC value for the alignment. Adjust the Vcutoff of this gun with the SCREEN potentiometer (see Fig. 8-1) on the LOT to the correct value (see table 8-1).
21. Press the STATUS/EXIT button to display the SDAM onscreen display.
22. Press the MENU button to enter the normal user menu.

23. In the normal user menu, use the MENU UP/DOWN keys to highlight the PICTURE sub menu (if necessary).
24. Press the MENU LEFT/RIGHT keys to enter the PICTURE sub menu.
25. Use the MENU UP/DOWN keys to select PICTURE.
26. Use the MENU LEFT/RIGHT keys to reset the value of PICTURE to the original value.
27. Use the MENU UP/DOWN keys to select BRIGHTNESS.
28. Use the MENU LEFT/RIGHT keys to reset the value of BRIGHTNESS to the original value.
29. Press the MENU button twice to return to the top level SDAM menu.
30. Use the POWER button on the remote control transmitter or the POWER button on the television set to turn off the television set. This will save the changes made in SDAM.

Figure: Vcutoff

Table: Vg2 cut-off point (Large Screen)

| Screen Size (RF= Real Flat) | Cut-off point (V) |
|--|-------------------|
| 20RF Matsushita 20RF Samsung 20RF LG Philips 25V Curved Face 27V Curved Face | +145 V +/- 4 V |
| 27RF 29RF LG Philips | +155 V +/- 4 V |
| 20RF Philips 27RF Samsung 32RF 26 Wide Screen RF 30 Wide Screen RF | +160 V +/- 4 V |

RF = Real Flat

V = (Visible) Diagonal Screen Measurement of Phosphor

Focusing

1. Connect the RF output of a video pattern generator to the antenna input.
2. Input a circle or crosshatch test pattern to the television set.
3. Press the AUTO PICTURE button on the remote control transmitter repeatedly to choose PERSONAL or MOVIES picture mode.
4. Adjust the FOCUS potentiometer (see Fig. 8-1) until the vertical lines near the left and right sides of the screen, and near the horizontal center of the screen, are at minimum width without visible haze.

Software Alignments and Settings

The following options are performed in the Service Default Alignment Mode (SDAM).

SDAM is described in the 'Service Modes, Error Codes and Fault Finding' section.

The following alignments are explained:

1. OPTIONS
2. TUNER
3. WHITE TONE
4. GEOMETRY
5. AUDIO

Options

Options are used to control the presence or absence of certain features and hardware.

How to change an Option Byte

An Option Byte represents a number of different options. Changing these bytes directly makes it possible to set all options very quickly. All options are controlled via seven option bytes.

Note: Each option byte controls several features of the television set; therefore, before changing option byte information, it is important to record the current option byte values. This ensures that the television features can be restored to the original settings, if necessary.

1. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the MENU button (do not allow the display to time out between entries while keying the sequence).

2. Use the MENU UP/DOWN keys to highlight the OPTIONS sub menu.
3. Press the MENU LEFT or MENU RIGHT key to enter the OPTIONS sub menu.
4. In the OPTIONS sub menu, press the MENU UP/DOWN keys to select 'OP 1' through 'OP 7'.
5. Use the number keys on the remote control transmitter to enter a new value for the selected option byte. The value must be entered as a three-digit value (for example, '4' would be entered as '0 0 4').
6. The selected value must be between '0' and '255'.
7. When all desired changes to the option bytes are made, press the MENU button to return to the top level SDAM menu. This will save changes to the option byte settings.
8. To ensure the option byte changes take effect: Turn the television set OFF by using the POWER button on the remote control transmitter or the local keyboard. Disconnect the television set from AC power for at least ten seconds. Reconnect the television set to AC power. Turn the television set ON by using the POWER button on the remote control transmitter or the local keyboard.

Figure: Options menu

How to change iTV Option Bytes

An Option Byte represents a number of different options. Changing these bytes directly makes it possible to set all options very quickly. All options are controlled via five option bytes.

Note: Each option byte controls several features of the television set; therefore, before changing option byte information, it is important to record the current option byte values. This ensures that the television features can be restored to the original settings, if necessary.

1. To enter SDM, you must use a Philips ITV commercial setup transmitter (such as the RC2573GR or the RG4172BK). Use the following method to enter SDM:

First, place the setup remote in setup mode. To place the RG4172BK in setup mode, press TV SETUP; to place the RC2573GR in setup mode, set the switch to the TV SETUP position. Then press the following key sequence on the remote control transmitter: **'0 6 2 5 9 6'** directly followed by the **'MENU'** button (do not allow the display to time out between entries while keying the sequence).

2. Use the MENU UP/DOWN keys to scroll through the OPTIONS until you reach OB1 through OB5.
3. Use the number keys on the remote control transmitter to enter a new value for the selected option byte. The value must be entered as a three-digit value (for example, '4' would be entered as '0 0 4').
4. The selected value must be between '0' and '255'.
5. When all desired changes to the option bytes are made, press the MENU button to return to the top level SDM menu. This will save changes to the option byte settings.
6. To ensure the option byte changes take effect: Turn the television set OFF by using the POWER button on the remote control transmitter or the local keyboard. Disconnect the television set from AC power for at least ten seconds. Reconnect the television set to AC power. Turn the television set ON by using the POWER button on the remote control transmitter or the local keyboard.

Option Code Tables

Tuner

Note: Described alignments are only necessary when the NVM (part reference number 7602) is replaced.

IF-PLL

This adjustment is auto-aligned. Therefore, no action is required.

AGC (AGC take over point)

1. Connect the RF output of a video pattern generator to the antenna input.
2. Input a color bar test pattern to the television set.
3. Set the amplitude of the video pattern generator to 10 mV and set the frequency to 61.25 MHz (channel 3).
4. Connect a DC multimeter to pin 1 of the tuner (item 1000 on the main chassis).
5. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the **MENU** button (do not allow the display to time out between entries while keying the sequence).

6. Use the MENU UP/DOWN keys to highlight the TUNER sub menu.
7. Press the MENU LEFT/RIGHT keys to enter the TUNER sub menu.
8. Use the MENU UP/DOWN keys to select AGC.
9. Use the MENU LEFT/RIGHT keys to adjust the AGC value (default value is 27) until the DC-voltage at pin 1 of the tuner lies between 3.8 V and 2.3 V.
10. Press the MENU button to return to the top level SDAM menu.
11. To ensure the AGC change takes effect:
 - Turn the television set 'off' by using the 'POWER' button on the remote control transmitter or the local keyboard.
 - Disconnect the television set from AC power for at least ten seconds.
 - Reconnect the television set to AC power.
 - Turn the television set 'on' by using the 'POWER' button on the remote control transmitter or the local keyboard.

SL (Slicing Level)

This adjustment sets the sync slicing level for non-standard signals. You must turn it 'on' to help correct picture instability in premium decoded cable channels.

- OFF: slicing level dependent on noise detector.
- ON: fixed slicing level of 70 %.

To adjust SL:

1. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the **MENU** button (do not allow the display to time out between entries while keying the sequence).
2. Use the MENU UP/DOWN keys to highlight the TUNER sub menu.
3. Press the MENU LEFT/RIGHT keys to enter the TUNER sub menu.

4. Use the MENU UP/DOWN keys to select SL.
5. Use the MENU LEFT/RIGHT keys to toggle SL 'Off' and 'On'.
6. Press the MENU button to return to the top level SDAM menu.
7. To ensure the SL setting is saved:
 - Turn the television set 'off' by using the 'POWER' button on the remote control transmitter or the local keyboard.
 - Disconnect the television set from AC power for at least ten seconds.
 - Reconnect the television set to AC power.
 - Turn the television set 'on' by using the 'POWER' button on the remote control transmitter or the local keyboard.

White Tone

Figure: White tone alignment menu

The values of the 'black cut off level' can be adjusted in the 'WHITE TONE' sub menu. Normally, no alignment is needed for 'WHITE TONE', and the given default values are used.

Default settings:

NORMAL (color temperature = 9600 K):

- NORMAL RED = 40
- NORMAL GREEN = 40
- NORMAL BLUE = 40

To adjust NORMAL RED, NORMAL GREEN, and NORMAL BLUE:

1. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the **MENU** button (do not allow the display to time out between entries while keying the sequence).
2. Use the MENU UP/DOWN keys to highlight the WHITE TONE sub menu.
3. Press the MENU LEFT/RIGHT keys to enter the WHITE TONE sub menu.
4. Use the MENU UP/DOWN keys to select NORMAL RED, NORMAL GREEN, or NORMAL BLUE.
5. Use the MENU LEFT/RIGHT keys to adjust the value of NORMAL RED, NORMAL GREEN, or NORMAL BLUE.
6. When all desired changes to the WHITE TONE sub menu values are made, press the MENU button to return to the top level SDAM menu.
7. To ensure the WHITE TONE settings are saved:
 - Turn the television set 'off' by using the 'POWER' button on the remote control transmitter or the local keyboard.
 - Disconnect the television set from AC power for at least ten seconds.
 - Reconnect the television set to AC power.
 - Turn the television set 'on' by using the 'POWER' button on the remote control transmitter or the local keyboard.

Geometry

The geometry alignments menu contains several items for correct picture geometry alignment.

1. Connect the RF output of a video pattern generator to the antenna input.
2. Input a crosshatch test pattern to the television set.
3. Set the amplitude of the video pattern generator to at least 1 mV and set the frequency to 61.25 MHz (channel 3).
4. Press the AUTO PICTURE button on the remote control transmitter repeatedly to choose PERSONAL or MOVIES picture mode.
5. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the MENU button (do not allow the display to time out between entries while keying the sequence).
6. Use the MENU UP/DOWN keys to highlight the GEOMETRY sub menu.
7. Press the MENU LEFT/RIGHT keys to enter the GEOMETRY sub menu.
8. Use the MENU UP/DOWN keys to highlight either the HORIZONTAL sub menu or the VERTICAL sub menu.
9. Press the MENU LEFT/RIGHT keys to enter either the HORIZONTAL sub menu or the VERTICAL sub menu.
10. Use the MENU UP/DOWN keys to select items in the HORIZONTAL sub menu or the VERTICAL sub menu.
11. Use the MENU LEFT/RIGHT keys to adjust the values of items in the HORIZONTAL and VERTICAL sub menus.
12. When all desired changes to the HORIZONTAL and VERTICAL sub menu values are made, press the MENU button twice to return to the top level SDAM menu.
13. To ensure the GEOMETRY settings are saved:
 - Turn the television set 'off' by using the 'POWER' button on the remote control transmitter or the local keyboard.

- Disconnect the television set from AC power for at least ten seconds.
- Reconnect the television set to AC power.
- Turn the television set 'on' by using the 'POWER' button on the remote control transmitter or the local keyboard.

Figure: Geometry alignments

The following alignments can be performed in the GEOMETRY sub menu:

Horizontal Amplitude and Phase:

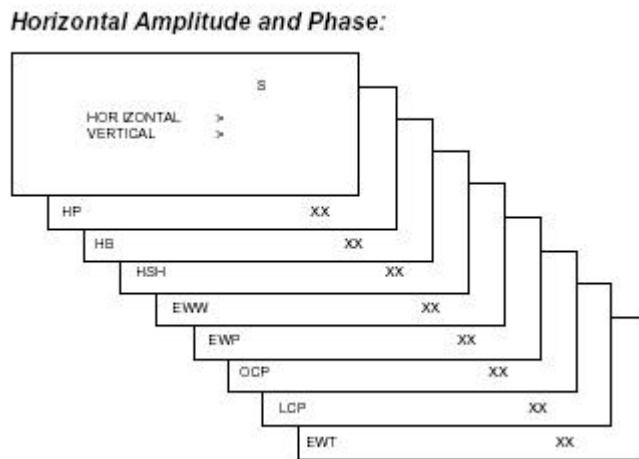

Figure: Horizontal alignment menu

- **Horizontal Shift (HSH).** Select Horizontal Shift to center the picture on the screen.
- **Horizontal Parallelogram (HP).** Set Horizontal Parallelogram to prevent the picture from slanting to one side.
- **Horizontal Bow (HB).** Set Horizontal Bow to prevent the top and bottom of picture from bending to the sides.
- **East West Width (EWW).** Select East-West Width and align the picture width until the complete test pattern is visible.
- **East West Parabola (EWP).** Select East-West Parabola and align the vertical sides until the sides are straightened.
- **Upper Corner Parabola (UCP).** Select Upper Corner Parabola to straighten the top of the vertical lines at the sides.
- **Lower Corner Parabola (LCP).** Select Lower Corner Parabola to straighten the bottom of the vertical lines at the sides.
- **East West Trapezium (EWT).** Align straight vertical lines in the middle of the screen.

Vertical Amplitude and Position:

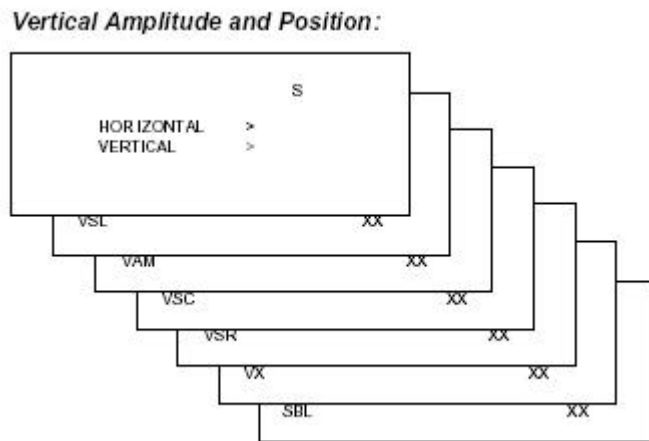

Figure: Vertical alignment menu

- **Vertical Amplitude (VAM).** Aligns the height of the picture (other vertical alignments are NOT compensated).
- **Vertical slope (VSL).** Aligns the picture so the proportions are the same at the top and bottom of the screen. This alignment must be performed first, before all other vertical alignments. Turning SBL 'on' will assist in performing this alignment.
- **Service blanking (SBL).** Turns the blanking of the lower half of the screen 'on' or 'off' (to be used in combination with the vertical slope alignment).
- **Vertical S-Correction (VSC).** Aligns the vertical linearity, so that the vertical intervals of the grid-patterns are the same over the entire height of the screen.
- **Vertical Shift (VSH).** Aligns the vertical center of the picture to the vertical center of the CRT. After performing this alignment, it may be necessary to perform the VAM alignment again.
- **Vertical Zoom (VX).** Adjusts the picture height.
- **Delta Horizontal Shift 60 Hz (H60).**
- **Delta Vertical Amplitude 60 Hz (V60).**

Methods of adjustment

1. Select Service Blanking (SBL) and set it to 1. The lower half of the picture will be blanked.
2. Press the MENU UP/DOWN buttons to select Vertical Slope (VSL).
3. Align VSL to start the blanking exactly at the horizontal white line at the center of the test circle (align the bottom of the screen so that castellations just disappear).
4. Press the MENU UP/DOWN buttons to select SBL and set it back to 0. The full picture reappears.
5. Select Vertical Amplitude (VAM) and align the picture height to approximately 13.0 - 13.1 blocks (align the top of the screen so that castellations just disappear).
6. Select Vertical Shift (VSH) and align for vertical centering of the picture on the screen.

Repeat the last two steps if necessary.

The table below lists the default GEOMETRY values for the different television sets.

Table: Default geometry values (Large Screen)

| Parameter | 20RF, 21RF, 25RF, 27RF, 29RF, 25", 28", 29"SF, 32V, 33" | 25V | 27V/29" | 35V | 28WS | 32WS | 28WSRF | 32WSRF |
|------------------------------------|--|-----|---------|-----|------|------|--------|--------|
| HP Horizontal- Parallelogram | 31 | 31 | 31 | 45 | 47 | 32 | 36 | 45 |
| HB Horizontal- Bow | 31 | 31 | 31 | 25 | 32 | 32 | 40 | 30 |
| HSH Horizontal Shift | 35 | 35 | 35 | 23 | 27 | 24 | 31 | 29 |
| EWV East- West Width | 34 | - | - | 45 | 36 | 39 | 40 | 33 |
| EWP East- West Parabola | 33 | - | - | 23 | 21 | 21 | 37 | 16 |
| UCP Upper Corner Parabola | 35 | - | - | 25 | 26 | 23 | 14 | 16 |

| | | | | | | | | |
|---------------------------------|--|-----|---------|-----|------|------|--------|--------|
| Parameter | 20RF, 21RF, 25RF, 27RF, 29RF, 25", 28", 29"Sf, 32V, 33" | 25V | 27V/29" | 35V | 28WS | 32WS | 28WSRF | 32WSRF |

| VSL Vertical Slope | 33 | 25 | 25 | 19 | 42 | 35 | 31 | 25 |
| VAM Vertical Amplitude | 26 | 32 | 32 | 31 | 30 | 23 | 23 | 30 |
| VSC Vertical S-Correction | 23 | 23 | 23 | 27 | 24 | 24 | 12 | 20 |
| VSH Vertical Shift | 31 | 28 | 28 | 26 | 18 | 23 | 36 | 34 |
| VX Vertical Zoom | 25 | - | - | 25 | 25 | 25 | 25 | 25 |

Audio

Figure: Audio alignment menu

No alignments are necessary for the AUDIO sub menu. Use the default values.

AF-M (NICAM threshold)

Default value is 300.

To adjust AF-M:

1. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the **MENU** button (do not allow the display to time out between entries while keying the sequence).
2. Use the MENU UP/DOWN keys to highlight the AUDIO sub menu.
3. Press the MENU LEFT/RIGHT keys to enter the AUDIO sub menu.
4. Use the MENU UP/DOWN keys to select AF-M.
5. Use the MENU LEFT/RIGHT keys to adjust the value of AF-M to 300.
6. Press the MENU button to return to the top level SDAM menu.
7. To ensure the AF-M setting is saved:

- Turn the television set 'off' by using the 'POWER' button on the remote control transmitter or the local keyboard.
- Disconnect the television set from AC power for at least ten seconds.
- Reconnect the television set to AC power.
- Turn the television set 'on' by using the 'POWER' button on the remote control transmitter or the local keyboard.

A2T (TV A2 Threshold)

Default value is 250.

To adjust A2T:

1. To enter SDAM, press the following key sequence on the remote control transmitter: **0 6 2 5 9 6** directly followed by the **MENU** button (do not allow the display to time out between entries while keying the sequence).
2. Use the MENU UP/DOWN keys to highlight the AUDIO sub menu.
3. Press the MENU LEFT/RIGHT keys to enter the AUDIO sub menu.
4. Use the MENU UP/DOWN keys to select A2T.
5. Use the MENU LEFT/RIGHT keys to adjust the value of A2T to 250.
6. Press the MENU button to return to the top level SDAM menu.
7. To ensure the A2T setting is saved:
 - Turn the television set 'off' by using the 'POWER' button on the remote control transmitter or the local keyboard.
 - Disconnect the television set from AC power for at least ten seconds.
 - Reconnect the television set to AC power.
 - Turn the television set 'on' by using the 'POWER' button on the remote control transmitter or the local keyboard.

Circuit Description

Index of this chapter:

1. Introduction
2. Audio Signal Processing
3. Video Signal Processing
4. Synchronization
5. Deflection
6. Power Supply
7. Control
8. Abbreviations
9. IC Data Sheets

Notes:

- For a good understanding of the following circuit descriptions, please use the [Block diagram](#) . Where necessary, you will find a separate drawing for clarification.
- Figures below can deviate slightly from the actual situation, due to different set executions.

Introduction

The 'L01.1U AC' chassis is a global TV chassis for the model year 2003 and is used for TV sets with screen sizes from 20" - 32" (large screen), in Super Flat, Real Flat, and Wide Screen executions. In comparison to its predecessor (the 'L01.1U AB'), the chassis has enhanced features like a 2D 3-line Comb-filter and 'Active Control'.

The standard architecture consists of a Mono Carrier, a Picture Tube panel, a Side I/O panel, and a Top Control panel.

The Mono Carrier consists primarily of conventional components with hardly any surface mounted devices.

Figure: Mono Carrier component side

The functions for video processing, microprocessor (P), and teletext (TXT) decoder are combined in one IC (TDA958xH), the so-called Ultimate One Chip (UOC). This chip is (surface) mounted on the copper side of the LSP.

Figure: Mono Carrier solder side

The 'L01.1U AC' is divided into 2 basic systems, i.e. mono and stereo sound. While the audio processing for the mono sound is done in the audio block of the UOC, an external audio processing IC is used for stereo sets.

The tuning system features 181 channels with on-screen display. The main tuning system uses a tuner, a microcomputer, and a memory IC mounted on the Mono Carrier. The microcomputer communicates with the memory IC, the customer keyboard, remote receiver, tuner, signal processor IC and the audio output IC via the I²C bus. The memory IC retains the settings for favorite stations, customer-preferred settings, and service / factory data.

The on-screen graphics and closed caption decoding are done within the microprocessor, and then sent to the signal processor IC to be added to the main signal.

The chassis utilizes a Switching Mode Power Supply (SMPS) for the main voltage source. The chassis has a 'hot' ground reference on the primary side and a cold ground reference on the secondary side of the power supply and the rest of the chassis.

Audio Signal Processing

Stereo

In stereo sets, the signal goes via the SAW filter (position 1002/1003), to the audio demodulator part of the UOC IC 7200. The audio output on pin 33 goes to the stereo decoder 7831/ 7861. The switch inside this IC selects either the internal decoder or an external source.

There are two stereo decoders versions used:

1. A BTSC DBX stereo/SAP decoder (MSP34X5 at position 7831) for the highest specified sets, and
2. A BTSC non-DBX stereo decoder (TDA9853 at position 7861) for BTSC Economic.

The output is fed to the to the audio amplifier (AN7522 at position 7901). The volume level is controlled at this IC (pin 9) by a control line (Volume|Mute) from the microprocessor. The audio signal from 7901 is then send to the speaker and headphone output panel.

Stereo audio signal processing

Mono

In mono sets, the signal goes via the SAW filter (position 1002/1003), to the audio demodulator part of the UOC IC 7200. The audio output on pin 48 goes to the audio amplifier (AN7523 at position 7902).

The volume level is controlled at this IC (pin 9) by a 'VolumeMute' control line from the microprocessor.

The audio signal from IC 7902 is then send to the speaker and headphone output panel.

Mono audio signal processing

Video Signal Processing

Introduction

The video signal-processing path consists of the following parts:

- RF signal processing.
- Video source selection.
- Video demodulation.
- Luminance / Chrominance signal processing.
- RGB control.
- RGB amplifier

The processing circuits listed above are all integrated in the UOC TV processor. The surrounding components are for the adaptation of the selected application. The I²C bus is for defining and controlling the signals.

RF Signal Processing

The incoming RF signal goes to the tuner (pos. 1000), where the 45.75 MHz IF signal is developed and amplified. The IF signals then exits the tuner from pin 11 to pass through the SAW filter (pos. 1002/1003). The shaped signal is then applied to the IF processor part of the UOC (pos. 7200).

Tuner AGC (Automatic Gain Control) will reduce the tuner gain and thus the tuner output voltage when receiving strong RF signals. Adjust the AGC takeover point via the Service Alignment Mode (SAM). The tuner AGC starts working when the video-IF input reaches a certain input level and will adjust this level via the I²C bus. The tuner AGC signal goes to the tuner (pin 1) via the open collector output (pin 22) of the UOC.

The IC also generates an Automatic Frequency Control (AFC) signal that goes to the tuning system via the I²C bus, to provide frequency correction when needed.

The demodulated composite video signal is available at pin 38 and then buffered by transistor 7201.

Video Source Selection

The Composite Video Blanking Signal (CVBS) from buffer 7201 goes to the audio carrier trap filters 1200, 1201, or 1202 (depending on the system used), to remove the audio signal. The signal then goes to pin 40 of IC 7200. The internal input switch selects the following input signals:

- Pin 40: terrestrial CVBS input
- Pin 42: external AV1 CVBS input
- Pin 44: external Side I/O CVBS or AV2 (or comb filter) luminance (Y) input
- Pin 45: external AV2 (or comb filter) chrominance (C) input

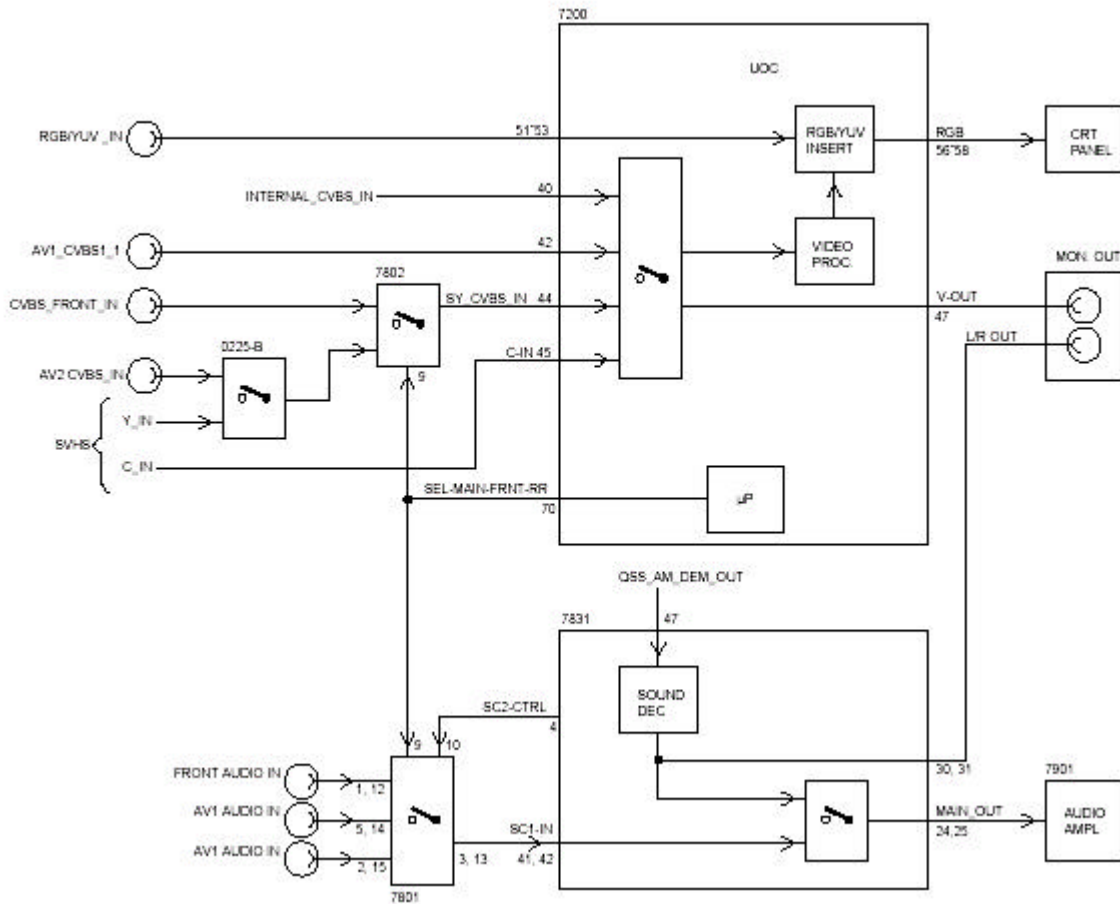

Figure: Video source selection

Once the signal source is selected, a chroma filter calibration is performed. The received color burst sub-carrier frequency is used for this. Correspondingly, the chroma band pass filter for PAL/NTSC processing or the cloche filter for SECAM processing is switched on. The selected luminance (Y) signal is supplied to the horizontal and vertical synchronization circuit and to the luminance processing circuit. In the luminance-processing block, the luminance signal goes to the chroma trap filter. This trap is switched 'on' or 'off' depending on the color burst detection of the chroma calibration circuit.

The group delay correction part can be switched between the BG and a flat group delay characteristic. This has the advantage that in multi-standard receivers no compromise has to be made for the choice of the SAW filter.

Comb Filter

Introduction

The video signal prepared for broadcast contains two major parts commingled, the luminance (makes a black and white picture in full detail) and chrominance (coloration with not quite all the detail). This method is used instead of red, green, and blue sub-signals in order to get the best looking picture that can be transmitted in the limited bandwidth of the broadcast channel.

Every TV receiver and VCR must contain a filter to separate the luminance and color (Y and C) again. Less than perfect Y/C separators lose resolution -- horizontal, vertical, or both. Also there are artifacts such as *rainbow swirls* where thin stripes should be, and *crawling dots* where patches of different colors meet. The perfect Y/C separator does not exist yet, although some 3D comb filters come close.

There are several methods for filtering:

- **No comb filter.** The cheapest solution is to use simple filters (notch, low pass, bandpass filters) that pass only the coarse and medium horizontal detail (lower 3 MHz or so) to the luminance circuits and pass the bulk of the color information still commingled with the fine luminance detail (3 to 4.2 MHz) to the color circuits.
- **Two line ordinary filter.** The improvements over 'no' comb filter are: revealing of finer horizontal detail overall, and some reduction of rainbow swirls. Improvement of fine detail is most prominent where details consist of upright dark and light lines.
- **Three line ordinary filter.** Improvement over the two-line filter consists of sharper transition from one color to another at sharp horizontal color boundaries, and less dot crawl.
- **Three line adaptive (a.k.a. 2D; dynamic) filter.** This method adapts the mixing according the line content of two fields. The big improvement that the 2D comb filter brings, is the elimination (or near elimination) of dot crawl. This type of filter

is used in the 'L01.1U AC' chassis. When present, the filter CBA is plugged-in on connector 1810B of the Mono Carrier.

- **Motion adaptive (3D) filter.** The difference with the 2D method is that this method uses three fields, so it also uses 'time' dimension. The 3D comb filter can achieve essentially perfect Y/C separation, eliminating all dot crawl and rainbow swirls for 'stationary' subject material, and perform at least as well as the 2D filter for the rest of the picture.

Implementation

The input (CVBS) signal comes from pin 47 of the UOC. On the comb filter panel, it first enters a low-pass filter (items 2409, 5408, 2408, 5407, and 2407) and an amplifier circuit (items 7401 and 7402). The LPF is used to eliminate the noise and the amplifier circuit to get a video input of $1 V_{PP}$.

The 'REF0' subcarrier reference (f_{SC}) is fed to pin 11 and internally multiplied by four ($4 \times 3.58 \text{ MHz} = 14.32 \text{ MHz}$) for the system clock.

After processing, the Y/C outputs (pins 25 and 23) are both filtered by a low-pass filter, in order to eliminate the high frequency harmonics of this system clock.

After filtering, the Y and C signals are fed to the source inputs of the UOC (pins 44 and 45).

Specification

If the comb filter is 'on', and the signal level drops below a specified value, then the filter is set to 'off'. Once the filter is set to 'off' it will remain 'off' until a channel change is performed.

When an S-Video (Y/C) or component video signal is offered to the TV, the filter is bypassed via the 'COMB_BYPASS' signal from the microprocessor.

Video Demodulation

The color decoder circuit detects whether the signal is a PAL, NTSC, or SECAM signal. The result is made known to the auto system manager. The PAL/NTSC decoder has an internal clock generator, which is stabilized to the required frequency by using the 12 MHz clock signal from the reference oscillator of the microcontroller / teletext decoder. The base-band delay line is used to obtain a good suppression of cross color effects. The Y signal and the delay line outputs U and V are applied to the luminance / chroma signal processing part of the TV processor.

Luminance / Chrominance signal Processing

The output of the YUV separator is fed to the internal YUV switch, which switches between the output of the YUV separator or the external YUV (for DVD or PIP) on pins 51-53. Pin 50 is the input for the insertion control signal called 'FBL-1'. When this signal level becomes higher than 0.9 V (but less than 3 V), the RGB signals at pins 51, 52, and 53 are inserted into the picture by using the internal switches.

Also, some picture improvement features are implemented in this part:

- **Black stretch.** This function corrects the black level of incoming signals, which have a difference between the black level and the blanking level. The amount of extension depends upon the difference between actual black level and the darkest part of the incoming video signal level. It is detected by means of an internal capacitor.
- **White stretch.** This function adapts the transfer characteristic of the luminance amplifier in a non-linear way depending on the average picture content of the luminance signal. It operates in such a way that maximum stretching is obtained when signals with a low video level are received. For bright pictures, stretching is not active.
- **Dynamic skin tone correction.** This circuit corrects (instantaneously and locally) the hue of those colors, which are located in the area in the UV plane that

matches the skin tone. The correction is dependent on the luminance, saturation, and distance to the preferred axis.

The YUV signal is then fed to the color matrix circuit, which converts it to R, G, and B signals.

The OSD/TXT signal from the microprocessor is mixed with the main signal at this point, before being output to the CRT board (pins 56, 57, and 58).

RGB Control

The RGB control circuit enables the picture parameters contrast, brightness, and saturation to be adjusted, by using a combination of the user menus and the remote control. Additionally automatic gain control for the RGB signals via cut-off stabilization is achieved in this functional block to obtain an accurate biasing of the picture tube.

Therefore, this block inserts the cut-off point measuring pulses into the RGB signals during the vertical retrace period.

The following additional controls are used:

- **Black current calibration loop.** Because of the 2-point black current stabilization circuit, both the black level and the amplitude of the RGB output signals depend on the drive characteristics of the picture tube. The system checks whether the returning measuring currents meet the requirements, and adapt the output level and gain of the circuit when necessary. After stabilization of the loop, the RGB drive signals are switched on. The 2-point black level system adapts the drive voltage for each cathode in such a way that the two measuring currents have the right value. This is done with the measurement pulses during the frame flyback. During the first frame, three pulses with a current of 8 μA are generated to adjust the cut off voltage. During the second frame, three pulses with a current of 20 μA are generated to adjust the 'white drive'. This has as a consequence, that a

change in the gain of the output stage will be compensated by a gain change of the RGB control circuit. Pin 55 (BLKIN) of the UOC is used as the feedback input from the CRT base panel.

- **Blue stretch.** This function increases the color temperature of the bright scenes (amplitudes which exceed a value of 80% of the nominal amplitude). This effect is obtained by decreasing the small signal gain of the red and green channel signals, which exceed this 80% level.
- **Beam current limiting.** A beam current limiting circuit inside the UOC handles the contrast and brightness control for the RGB signals. This prevents the CRT from being overdriven, which could otherwise cause serious damage in the line output stage. The reference used for this purpose is the DC voltage on pin 54 (BLCIN) of the TV processor. Contrast and brightness reduction of the RGB output signals is therefore proportional to the voltage present on this pin. Contrast reduction starts when the voltage on pin 54 is lower than 2.8 V. Brightness reduction starts when the voltage on pin 54 is less than 1.7 V. The voltage on pin 54 is normally 3.3 V (limiter not active). During set switch-off, the black current control circuit generates a fixed beam current of 1 mA. This current ensures that the picture tube capacitance is discharged. During the switch-off period, the vertical deflection is placed in an over-scan position, so that the discharge is not visible on the screen.

RGB Amplifier

From outputs 56, 57, and 58 of IC 7200 the RGB signals are applied to the integrated output amplifier (7330) on the CRT panel. Via the outputs 7, 8, and 9, the picture tube cathodes are driven.

The supply voltage for the amplifier is +200 V and is derived from the line output stage.

SCAVEM (if present)

The SCAn VElocity Modulation (SCAVEM) circuitry is implemented in the layout of the picture tube panel. It is thus not an extra module. This circuit influences the horizontal deflection as a function of the picture content. In an ideal square wave, the sides are limited in slope due to a limited bandwidth (5 MHz). SCAVEM will improve the slope as follows:

- **At a positive slope** , a SCAVEM current is generated which supports the deflection current. At the first half of the slope, the spot is accelerated and the picture is darker. At the second half of the slope, the spot is delayed and the slope becomes steeper.
- **At the end of the slope** , the SCAVEM-current decays to zero and the spot is at the original position. An overshoot occurs which improves the impression of sharpness.
- **At the negative slope** , the SCAVEM-current counteracts the deflection. During the first half of the slope, the spot is delayed and the slope becomes steeper. During the second half the spot accelerates, the SCAVEM-current is zero at the end of the slope.

The R/G/B signals are fed into the SCAVEM circuit and differentiated by C2364/2365/2366 and the input impedance of 7360 stage. Diode 6364 (Schottky diode) is the coring component, which blocks all the signals below 0.3 V so that the noise is not amplified and all the signals larger than 0.3V are differentiated and amplified. After differentiation, the signal is amplified by Q7360 with 3369 as the collector resistor. The biasing of the 7360 stage is done by 3369, 3361, 3360, 3362, and 3363.

Items 6367, 2367, 3367, 3361, and 2360 work as the clipping components that limit the SCAVEM current at a certain level, to prevent SCAVEM over correction.

After being buffered by 7369, the differentiated signals are coupled through 2375 and 2380 to the output stage. The output stage is configured into cascode stage and push-pull operation. The biasing is done by 3373, 3375, 3376, 3380, 3381, 3383, 3374, and 3384. The working voltage of the transistors is settled at half the supply voltage.

At the rising portion of the R/G/B signals, cascode 7380 and 7382 will be operating and will pull the current through the SCAVEM coil. Contrarily, at the falling portion of the R/G/B signals, cascode 7373 and 7366 will be operating and will push the current through the SCAVEM coil.

The capacitors 2362, 2373, and 2381 ground the high frequencies, to prevent high frequency amplification. The ferrite bead 5376 is for EMC purpose. Resistors 3374 and 3384 determine the output SCAVEM current.

Items 2378 and 3378 are for the fine-tuning for different SCAVEM coil impedances.

They also help to suppress high frequency oscillation. Capacitor 2369 helps to suppress the high frequency components and also controls the SCAVEM delay.

Synchronization

Inside IC 7200 part D, the vertical and horizontal sync pulses are separated. These 'H' and 'V' signals are synchronized with the incoming CVBS signal. They are then fed to the H- and V-drive circuits and to the OSD/TXT circuit for synchronization of the On Screen Display and Teletext (CC) information.

Deflection

Horizontal Drive

The horizontal drive signal is obtained from an internal VCO, which is running at twice the line frequency. This frequency is divided by two, to lock the first control loop to the incoming signal.

When the IC is switched 'on', the 'Hdrive' signal is suppressed until the frequency is correct.

The 'Hdrive' signal is available at pin 30. The 'Hflybk' signal is fed to pin 31 to phase lock the horizontal oscillator, so that Q7462 cannot switch 'on' during the flyback time.

The 'EWdrive' signal for the E/W circuit (if present) is available on pin 15, where it drives transistor 7400 to make linearity corrections in the horizontal drive.

When the set is switched on, the '+8V' voltage goes to pin 9 of IC 7200. The horizontal drive starts up in a soft start mode. It starts with a very short TON time of the horizontal output transistor. The TOFF of the transistor is identical to the time in normal operation. The starting frequency during switch on is therefore about 2 times higher than the normal value. The 'on' time is slowly increased to the nominal value in 1175 ms. When the nominal value is reached, the PLL is closed in such a way that only very small phase corrections are necessary.

The 'EHTinformation' line on pin 11 is intended to be used as a 'X-ray' protection. When this protection is activated (when the voltage exceeds 6 V), the horizontal drive (pin 30) is switched 'off' immediately. If the 'H-drive' is stopped, pin 11 will become low again.

Now the horizontal drive is again switched on via the slow start procedure.

The 'EHTinformation' line (Aquadag) is also fed back to the UOC IC 7200 pin 54, to adjust the picture level in order to compensate for changes in the beam current.

The filament voltage is monitored for 'no' or 'excessive' voltage. This voltage is rectified by diode 6447 and fed to the emitter of transistor 7443. If this voltage goes above 6.8 V, transistor 7443 will conduct, making the 'EHT0' line 'high'. This will immediately switch off the horizontal drive (pin 30) via the slow stop procedure.

The horizontal drive signal exits IC 7200 at pin 30 and goes to 7462, the horizontal driver transistor. The signal is amplified and coupled to the base circuit of 7460, the horizontal output transistor. This will drive the line output transformer (LOT) and associated circuit. The LOT provides the extra high voltage (EHT), the VG2 voltage and the focus and filament voltages for the CRT, while the line output circuit drives the horizontal deflection coil.

Vertical Drive

A divider circuit performs the vertical synchronization. The vertical ramp generator needs an external resistor (R3245, pin 20) and capacitor (C2244, pin 21). A differential output is available at pins 16 and 17, which are DC-coupled with the vertical output stage.

During the insertion of RGB signals, the maximum vertical frequency is increased to 72 Hz so that the circuit can also synchronize on signals with a higher vertical frequency like VGA.

To avoid damage of the picture tube when the vertical deflection fails, the guard output is fed to the beam current limiting input. When a failure is detected, the RGB-outputs are blanked. When no vertical deflection output stage is connected, this guard circuit will also blank the output signals.

These 'V_DRIVE+' and 'V_DRIVE-' signals are applied to the input pins 1 and 2 of IC 7471 (full bridge vertical deflection amplifier). These are voltage driven differential inputs. As the driver device (IC 7200) delivers output currents, R3474 and R3475 convert them to voltage. The differential input voltage is compared with the voltage

across measuring resistor R3471 that provides internal feedback information. The voltage across this measuring resistor is proportional to the output current, which is available at pins 4 and 7 where they drive the vertical deflection coil (connector 0222) in phase opposition.

IC 7471 is supplied by +13 V. The vertical flyback voltage is determined by an external supply voltage at pin 6 (VlotAux+50V). This voltage is almost totally available as flyback voltage across the coil, this being possible due to the absence of a coupling capacitor (which is not necessary, due to the 'bridge' configuration).

Deflection Corrections

The Linearity Correction

A constant voltage on the horizontal deflection coil should result in a sawtooth current. This however is not the case as the resistance of the coil is not negligible. In order to compensate for this resistance, a pre-magnetized coil L5457 is used. R3485 and C2459 ensure that L5457 does not excite, because of its own parasite capacitance. This L5457 is called the 'linearity coil'.

The Mannheim Effect

When clear white lines are displayed, the high-voltage circuit is heavily loaded. During the first half of the flyback, the high voltage capacitors are considerable charged. At that point in time, the deflection coil excites through C2465. This current peak, through the high-voltage capacitor, distorts the flyback pulse. This causes synchronization errors, causing an oscillation under the white line.

During $t_3 - t_5$, C2490//2458 is charged via R3459. At the moment of the flyback, C2490//2458 is subjected to the negative voltage pulses of the parabola as a result of which D6465 and D6466 are conducting and C2490//2458 is switched in parallel with C2456//2457. The high-voltage diodes are conducting this moment. Now extra energy is

available for excitation through C2465 and the line deflection. Consequently, the flyback pulse is less distorted.

The S-Correction

Since the sides of the picture are further away from the point of deflection than from the center, a linear sawtooth current would result in a non-linear image being scanned (the center would be scanned slower than the sides). For the center-horizontal line, the difference in relation of the distances is larger than those for the top and bottom lines. An S-shaped current will have to be superimposed onto the sawtooth current. This correction is called finger-length correction or S-correction.

C2456//2457 is relatively small, as a result of which the sawtooth current will generate a parabolic voltage with negative voltage peaks. Left and right, the voltage across the deflection coil decreases, and the deflection will slow down; in the center, the voltage increases and deflection is faster. The larger the picture width, the higher the deflection current through C2456//2457. The current also results in a parabolic voltage across C2484//2469, resulting in the finger length correction proportionally increasing with the picture width. The east/west drive signal will ensure the largest picture width in the center of the frame. Here the largest correction is applied.

East/West Correction

In this chassis, there are three types of CRTs, namely the 100°, 110° and wide screen CRTs. The 100° CRT is raster-correction-free and does not need East/West correction. The 110° 4:3 CRT comes with East/West correction and East/West protection. The wide screen TV sets have all the correction of the 110 4:3 CRT and also have additional picture format like the 4:3 format, 16:9, 14:9, 16:9 zoom, subtitle zoom and the Super-Wide picture format

A line, written at the upper- or lower side of the screen, will be larger at the screen center when a fixed deflection current is used. Therefore, the amplitude of the deflection current must be increased when the spot approaches the center of the screen. This is called the East/West or pincushion correction.

The 'Ewdrive' signal from pin 15 of IC 7200 takes care for the correct correction. It drives FET 7400. It also corrects breathing of the picture, due to beam current variations (the EHT varies dependent of the beam current). This correction is derived from the 'EHTinformation' line.

Two protections are built-in for the E/W circuit: over-current and over-voltage protection. See paragraph 9.7.6.

Panorama

The panorama function is only used in 16:9 sets. This is a function to enable the 4:3 and Super-Wide feature. It drives the 'Bass_panorama' line, to activate relay 1400. When this relay is switched on, the capacitors 2453//2454 are added in parallel to the default S-correction capacitors 2456//2457. This results in an increased capacitance, a lower resonance frequency of the line deflection coil and the S-correction capacitors and therefore a less steep S-corrected line deflection current.

Power Supply

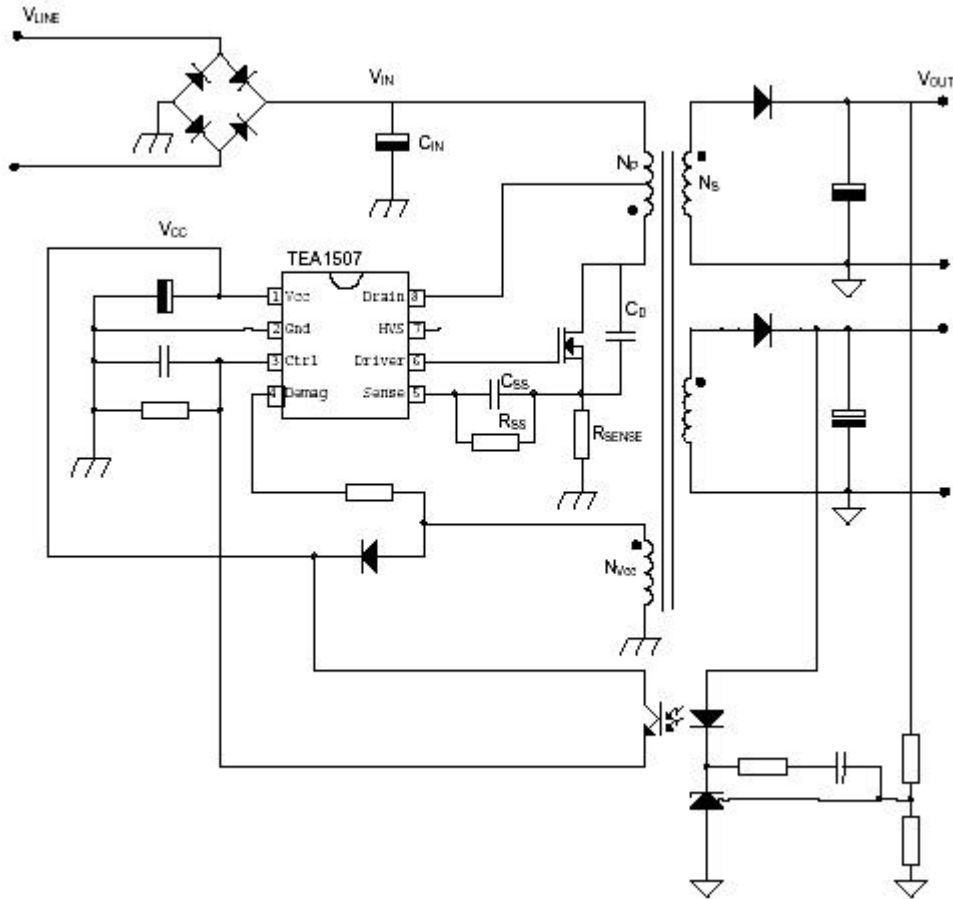

Figure: Switched Mode Power Supply standard circuit

Figure: Internal block diagram of the driver IC (TEA1507)

Introduction

The supply is a Switching Mode Power Supply (SMPS). The frequency of operation varies with the circuit load. This 'Quasi-Resonant Flyback' behavior has some important benefits compared to a 'hard switching' fixed frequency Flyback converter. The efficiency can be improved up to 90%, which results in lower power consumption. Moreover, the supply runs cooler and safety is enhanced.

The power supply starts operating when a DC voltage goes from the rectifier bridge via T5520, R3532 to pin 8. The operating voltage for the driver circuit is also taken from the 'hot' side of this transformer.

The switching regulator IC 7520 starts switching the FET 'on' and 'off', to control the current flow through the primary winding of transformer 5520. The energy stored in the primary winding during the 'on' time is delivered to the secondary windings during the 'off' time.

The 'MainSupply' line is the reference voltage for the power supply. It is sampled by resistors 3543 and 3544 and fed to the input of the regulator 7540 / 6540. This regulator drives the feedback optocoupler 7515 to set the feedback control voltage on pin 3 of 7520.

The power supply in the set is 'on' any time AC power goes to the set.

Derived Voltages

The voltages supplied by the secondary windings of T5520 are:

- 'MainAux' for the audio circuit (voltage depends on set execution, see table below),
- 3.3 V and 3.9 V for the microprocessor and
- 'MainSupply' for the horizontal output (voltage depends on set execution, see table below).

Other supply voltages are provided by the LOT. It supplies +50 V (only for large screen sets), +13 V, +8 V, +5 V, and a +200 V source for the video drive. The secondary voltages of the LOT are monitored by the 'EHTinformation' lines. These lines are fed to the video processor part of the UOC IC 7200 on pins 11 and 34.

This circuit will shut 'off' the horizontal drive in case of over-voltage or excessive beam current.

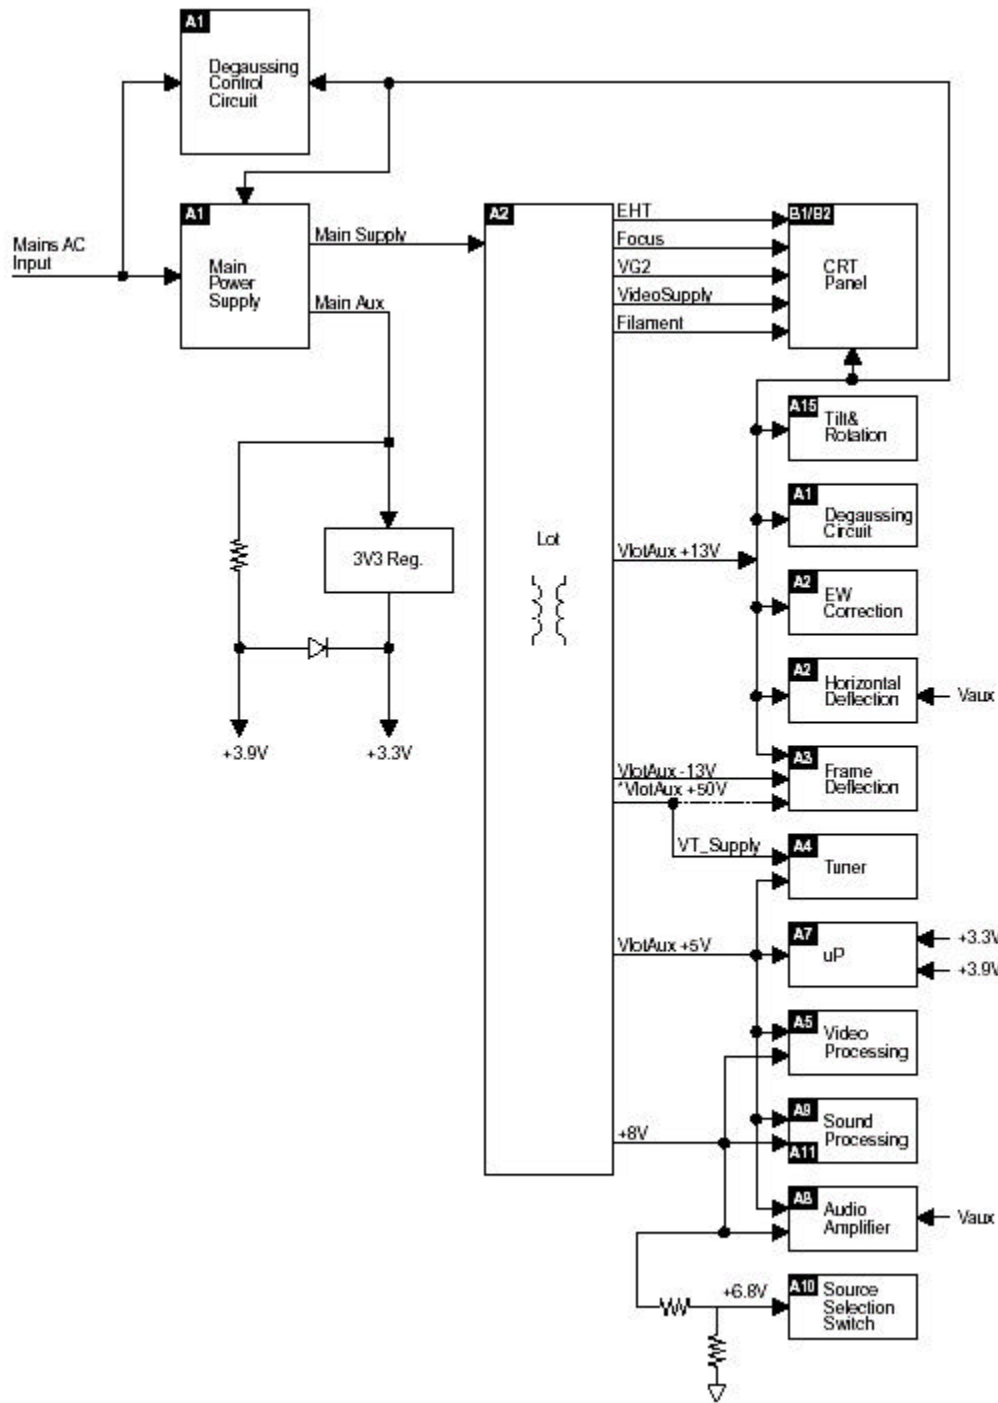

Figure: Derived voltages

Degaussing

When the set is switched on, the degaussing relay 1515 is immediately activated as transistor 7580 is conducting. Due to the RC-time of R3580 and C2580, it will last about 3 to 4 seconds before transistor 7580 is switched off.

Basic IC Functionality

For a clear understanding of the Quasi-Resonant behavior, it is possible to explain it by a simplified circuit diagram (see Figure below). In this circuit diagram, the secondary side is transferred to the primary side and the transformer is replaced by an inductance LP. CD is the total drain capacitance including the resonance capacitor CR, parasitic output capacitor COSS of the MOSFET and the winding capacitance CW of the transformer. The turn ratio of the transformer is represented by n (N_P/N_S).

Figure: QR-mode time intervals

In the Quasi-Resonant mode each period can be divided into four different time intervals, in chronological order:

- **Interval 1: $t_0 < t < t_1$ primary stroke.** At the beginning of the first interval, the MOSFET is switched 'on' and energy is stored in the primary inductance (magnetization). At the end, the MOSFET is switched 'off' and the second interval starts.
- **Interval 2: $t_1 < t < t_2$ commutation time.** In the second interval, the drain voltage will rise from almost zero to $V_{IN} + n \cdot (V_{OUT} + V_F)$. V_F is the forward voltage drop of

the diode that will be omitted from the equations from now on. The current will change its positive derivative, corresponding to V_{IN}/L_P , to a negative derivative, corresponding to $-n \cdot V_{OUT}/L_P$.

- **Interval 3: $t_2 < t < t_3$ secondary stroke.** In the third interval, the stored energy is transferred to the output, so the diode starts to conduct and the inductive current I_L will decrease. In other words, the transformer will be demagnetized. When the inductive current has become zero the next interval begins.
- **Interval 4: $t_3 < t < t_{00}$ resonance time.** In the fourth interval, the energy stored in the drain capacitor C_D will start to resonate with the inductance L_P . The voltage and current waveforms are sinusoidal waveforms. The drain voltage will drop from $V_{IN} + n \cdot V_{OUT}$ to $V_{IN} - n \cdot V_{OUT}$.

Frequency Behavior

The frequency in the QR-mode is determined by the power stage and is not influenced by the controller (important parameters are L_P and C_D). The frequency varies with the input voltage V_{IN} and the output power P_{OUT} . If the required output power increases, more energy has to be stored in the transformer. This leads to longer magnetizing t_{PRIM} and demagnetizing t_{SEC} times, which will decrease the frequency. See the frequency versus output power characteristics below. The frequency characteristic is not only output power-, but also input voltage dependent. The higher the input voltage, the smaller t_{PRIM} , so the higher the frequency will be.

Figure: QR frequency behavior

Point P1 is the minimum frequency f_{MIN} that occurs at the specified minimum input voltage and maximum output power required by the application. Of course the minimum frequency has to be chosen above the audible limit (>20 kHz).

Start-Up Sequence

When the rectified AC voltage V_{IN} (via the center tap connected to pin 8) reaches the Mains dependent operation level (Mlevel: between 60 and 100 V), the internal 'Mlevel switch' will be opened and the start-up current source is enabled to charge capacitor C2521 at the V_{CC} pin as shown below.

The 'soft start' switch is closed when the V_{CC} reaches a level of 7 V and the 'soft start' capacitor C_{SS} (C2522, between pin 5 and the sense resistor R3526), is charged to 0.5 V.

Once the V_{CC} capacitor is charged to the start-up voltage $V_{\text{CC}}\text{-start}$ (11 V), the IC starts driving the MOSFET. Both internal current sources are switched 'off' after reaching this

start-up voltage. Resistor R_{SS} (3524) will discharge the 'soft start' capacitor, such that the peak current will slowly increase. This to prevent 'transformer rattle'.

During start-up, the V_{CC} capacitor will be discharged until the moment that the primary auxiliary winding takes over this voltage.

Figure: Start-up behavior

The moment that the voltage on pin 1 drops below the 'under voltage lock out' level ($UVLO = \pm 9\text{ V}$), the IC will stop switching and will enter a safe restart from the rectified mains voltage.

Operation

The supply can run in three different modes depending on the output power:

- **Quasi-Resonant mode (QR).** The 'QR' mode, described above, is used during normal operation. This will give a high efficiency.
- **Frequency Reduction mode (FR).** The 'FR' mode (also called 'VCO' mode) is implemented to decrease the switching losses at low output loads. In this way, the efficiency at low output powers is increased, which enables power consumption smaller than 3 W during stand-by. The voltage at the pin 3 (Ctrl) determines where the frequency reduction starts. An external Ctrl voltage of 1.425 V corresponds with an internal VCO level of 75 mV. This fixed VCO level is called $V_{VCO,start}$. The frequency will be reduced in relation to the VCO voltage between 75 mV and 50 mV (at levels larger than 75 mV, Ctrl voltage < 1.425V, the oscillator will run on maximum frequency $f_{oscH} = 175\text{ kHz}$ typically). At 50 mV ($V_{VCO,max}$), the frequency is reduced to the minimum level of 6 kHz. Valley switching is still active in this mode.
- **Minimum Frequency mode (MinF).** At VCO levels below 50 mV, the minimum frequency will remain on 6 kHz, which is called the 'MinF' mode. Because of this low frequency, it is possible to run at very low loads without having any output regulation problems.

Figure: Different supply modes

Safe-Restart Mode

This mode is introduced to prevent the components from being destroyed during eventual system fault conditions. It is also used for the Burst mode. The Safe-Restart mode will be entered if it is triggered by one of the following functions:

- Over voltage protection,
- Short winding protection,
- Maximum 'on time' protection,
- V_{CC} reaching UVLO level (fold back during overload),
- Detecting a pulse for Burst mode,
- Over temperature protection.

When entering the Safe-Restart mode, the output driver is immediately disabled and latched. The V_{CC} winding will not charge the VCC capacitor anymore and the V_{CC} voltage will drop until UVLO is reached. To recharge the V_{CC} capacitor, the internal current source ($I_{(restart)(VCC)}$) will be switched 'on' to initiate a new start-up sequence as described before. This Safe-Restart mode will persist until the controller detects no faults or burst triggers.

Standby

The set goes to Standby in the following cases:

- After pressing the 'standby' key on the remote control.
- When the set is in protection mode.

In Standby, the power supply works in 'burst mode'. Burst mode can be used to reduce the power consumption below 1 W at stand-by. During this mode, the controller is active (generating gate pulses) for only a short time and for a longer time inactive waiting for the next burst cycle.

In the active period, the energy is transferred to the secondary and stored in the buffer capacitor C_{STAB} in front of the linear stabilizer (see Figure below). During the inactive period, the load (e.g. microprocessor) discharges this capacitor. In this mode, the controller makes use of the Safe-Restart mode.

Figure: Supply standby mode (burst mode)

The system enters burst mode standby when the microprocessor activates the 'Stdby_con' line. When this line is pulled high, the base of Q7541 is allowed to go high. This is triggered by the current from collector Q7542. When Q7541 turns 'on', the opto-coupler (7515) is activated, sending a large current signal to pin 3 (Ctrl). In response to this signal, the IC stops switching and enters a 'hiccup' mode. This burst activation signal should be present for longer than the 'burst blank' period (typically 30 s): the blanking time prevents false burst triggering due to spikes.

Burst mode standby operation continues until the microcontroller pulls the 'Stdby_con' signal low again. The base of Q7541 is unable to go high, thus cannot turn 'on'. This will disable the burst mode. The system then enters the start-up sequence and begins normal switching behavior.

For a more detailed description of one burst cycle, three time intervals are defined:

t1: Discharge of V_{CC} when gate drive is active. During the first interval, energy is transferred, which result in a ramp-up of the output voltage (V_{STAB}) in front of the stabilizer. When enough energy is stored in the capacitor, the IC will be switched 'off' by a current pulse generated at the secondary side. This pulse is transferred to the primary side via the opto coupler. The controller will disable the output driver (safe restart mode) when the current pulse reaches a threshold level of 16 mA into the Ctrl pin. A resistor R1 (R3519) is placed in series with the opto coupler, to limit the current going into the Ctrl pin. Meanwhile the V_{CC} capacitor is discharged but has to stay above V_{UVLO} .

t2: Discharge of V_{CC} when gate drive is inactive. During the second interval, the V_{CC} is discharged to V_{UVLO} . The output voltage will decrease depending on the load.

t3: Charge of V_{CC} when gate drive is inactive. The third interval starts when the UVLO is reached. The internal current source charges the V_{CC} capacitor (also the soft start capacitor is recharged). Once the V_{CC} capacitor is charged to the start-up voltage, the driver is activated and a new burst cycle is started.

Figure: Burst mode waveforms

Protection Events

The SMPS IC 7520 has the following protection features:

Demagnetization sense

This feature guarantees discontinuous conduction mode operation in every situation. The oscillator will not start a new primary stroke until the secondary stroke has ended. This is to ensure that FET 7521 will not turn on until the demagnetization of transformer 5520 is complete. The function is an additional protection feature against:

- saturation of the transformer,
- damage of the components during initial start-up,
- an overload of the output.

The demagnetization sense is realized by an internal circuit that guards the voltage (V_{demag}) at pin 4 that is connected to V_{CC} winding by resistor R1 (R3522).

The Figure below shows the circuit and the idealized waveforms across this winding.

Figure: Demagnetization protection

Over Voltage Protection

The Over Voltage Protection ensures that the output voltage will remain below an adjustable level. This works by sensing the auxiliary voltage via the current flowing into pin 4 (DEM) during the secondary stroke. This voltage is a well-defined replica of the output voltage. Any voltage spikes are averaged by an internal filter.

If the output voltage exceeds the OVP trip level, the OVP circuit switches the power MOSFET 'off'.

Next, the controller waits until the 'under voltage lock out' level ($UVLO = \pm 9 \text{ V}$) is reached on pin 1 (V_{CC}). This is followed by a safe restart cycle, after which switching starts again. This process is repeated as long as the OVP condition exists. The output voltage at which the OVP function trips, is set by the demagnetization resistor R3522.

Over Current Protection

The internal OCP protection circuit limits the 'sense' voltage on pin 5 to an internal level.

Over Power Protection

During the primary stroke, the rectified AC input voltage is measured by sensing the current drawn from pin 4 (DEM). This current is dependent on the voltage on pin 9 of transformer 5520 and the value of R3522. The current information is used to adjust the peak drain current, which is measured via pin I_{SENSE} .

Short Winding Protection

If the 'sense' voltage on pin 5 exceeds the short winding protection voltage (0.75 V), the converter will stop switching. Once V_{CC} drops below the UVLO level, capacitor C2521 will be recharged and the supply will start again. This cycle will be repeated until the short circuit is removed (safe restart mode).

The short winding protection will also protect in case of a secondary diode short circuit. This protection circuit is activated after the leading edge blanking time (LEB).

LEB time

The LEB (Leading Edge Blanking) time is an internally fixed delay, preventing false triggering of the comparator due to current spikes. This delay determines the minimum 'on' time of the controller.

Over Temperature protection

When the junction temperature exceeds the thermal shutdown temperature (typ. 140° C), the IC will disable the driver. When the V_{CC} voltage drops to UVLO, the V_{CC} capacitor will be recharged to the V(start) level. If the temperature is still too high, the V_{CC} voltage will drop again to the UVLO level (Safe-Restart mode). This mode will persist until the junction temperature drops 8 degrees typically below the shutdown temperature.

Mains dependent operation enabling level

To prevent the supply from starting at a low input voltage, which could cause audible noise, a mains detection is implemented (Mlevel). This detection is provided via pin 8, which detects the minimum start-up voltage between 60 and 100 V. As previous mentioned, the controller is enabled between 60 and 100 V.

An additional advantage of this function is the protection against a disconnected buffer capacitor (C_{IN}). In this case, the supply will not be able to start-up because the V_{CC} capacitor will not be charged to the start-up voltage.

Control

Figure: Block diagram set control

Introduction

The microprocessor part of the UOC, has the complete control and teletext on board. User menu, Service Default Mode, Service Alignment Mode and Customer Service Mode are generated by the uP. Communication to other ICs is done via the I² C-bus.

I² C-Bus

The main control system, which consists of the microprocessor part of the UOC (7200), is linked to the external devices (tuner, NVM, MSP, etc) by means of the I² C-bus. An internal I² C-bus is used to control other signal processing functions, like video processing, sound IF, vision IF, synchronization, etc.

User Interface

The 'L01.1U AC' uses a remote control with RC5 protocol. The incoming signal is connected to pin 67 of the UOC.

The 'Top Control' keyboard, connected to UOC pin 80, can also control the set. Button recognition is done via a voltage divider.

The front LED (6691) is connected to an output control line of the microprocessor (pin 5). It is activated to provide the user information about whether or not the set is working correctly (e.g., responding to the remote control, normal operation (USA only) or fault condition)

In- and Output Selection

For the control of the input and output selections, there are three lines:

- **STATUS1.** This signal provides information to the microprocessor on whether a video signal is available on the SCART1 AV input and output port (only for Europe). This signal is not connected in NAFTA sets.
- **STATUS2.** This signal provides information to the microprocessor on whether a video signal is available on the SCART2 AV input and output port (only for Europe). For sets with an SVHS input it provides the additional information if a

Y/C or CVBS source is present. The presence of an external Y/C source makes this line 'high' while a CVBS source makes the line 'low'.

- **SEL-MAIN-FRNT-RR.** This is the source select control signal from the microprocessor. This control line is under user control or can be activated by the other two control lines.

Power Supply Control

The microprocessor part is supplied with 3.3 V and 3.9 V both derived from the 'MainAux' voltage via a 3V3 stabilizer (7560) and a diode.

Two signals are used to control the power supply:

- **Stdbby_con.** This signal is generated by the microprocessor when over-current takes place at the 'MainAux' line. This is done to enable the power supply into standby burst mode, and to enable this mode during a protection. This signal is 'low' under normal operation conditions and goes to 'high' (3.3 V) under 'standby' and 'fault' conditions.
- **POWER_DOWN.** This signal is generated by the power supply. Under normal operating conditions, this signal is 'high' (3.3 V). During 'standby' mode, this signal is a pulse train of approx. 10 Hz and a 'high' duration of 5 ms. It is used to give information to the UOC about the fault condition in the Audio amplifier supply circuit. This information is generated by sensing the current on the 'MainAux' line (using voltage drop across R3564 to trigger Q7562). This signal goes 'low' when the DC-current on the 'MainAux' line exceeds 1.6 - 2.0 A. It is also used to give an early warning to the UOC about a power failure. Then the information is used to mute the sound amplifier to prevent a switch off noise and to solve the switch-off spot.

Protection Events

Several protection events are controlled by the UOC:

- **BC protection** , to protect the picture tube from a too high beam current. The UOC has the capability of measuring the normal back level current during the vertical flyback. So if for some reason the CRT circuit is malfunctioning (i.e. high beam current), the normal black current will be out of the 75 A range, and the UOC will trigger the power supply to shut down. However, this is a high beam-current situation, the TV screen will be bright white before the set is shut down.
- **E/W protection** , two protection mechanisms are built in, over-current and over-voltage.
 - In case of over-current due to defective parts in the line deflection output stage, a high current will flow through resistors 3405//3406. If this current is large enough to create a voltage drop of 0.7 V across 3405//3406, transistor Q7606 (in A7 diagram) will conduct and pin 80 of the UOC will be pulled down. Thereafter, the UOC will shut down the power supply. In case of further current increase, the fused resistor 3411 is built-in for double protection.
 - In case of a high voltage appearing across capacitor 2401 (dependent of the tube size), which is high enough to trigger zener diode 6401 into conduction, transistor Q7606 (in A7 diagram) will conduct and UOC is triggered to shut down the power supply.
- **I²C protection** , to check whether all I²C ICs are functioning.

In case one of these protections is activated, the set will go into 'standby'.

The 'on' and 'standby' LEDs are controlled via the UOC.

Abbreviation list

| Abbreviation | Description |
|--------------|---|
| 2CS | 2 Carrier (or Channel) Stereo |
| ACI | Automatic Channel Installation: algorithm that installs TV sets directly from cable network by means of a predefined TXT page |
| ADC | Analogue to Digital Converter |
| AFC | Automatic Frequency Control: control signal used to tune to the correct frequency |
| AFT | Automatic Fine Tuning |
| AGC | Automatic Gain Control: algorithm that controls the video input of the feature box |
| AM | Amplitude Modulation |
| AP | Asia Pacific |
| AR | Aspect Ratio: 4 by 3 or 16 by 9 |
| ATS | Automatic Tuning System |
| AV | External Audio Video |
| AVL | Automatic Volume Level |
| BC-PROT | Beam Current Protection |
| BCL | Beam Current Limitation |
| B/G | Monochrome TV system. Sound carrier distance is 5.5 MHz |

| | |
|-----------------|--|
| BLC-INFORMATION | Black current information |
| BTSC | Broadcast Television Standard Committee. Multiplex FM stereo sound system, originating from the USA and used e.g. in LATAM and AP-NTSC countries |
| B-TXT | Blue teletext |
| CBA | Circuit Board Assembly |
| CC | Closed Caption |
| ComPair | Computer aided rePair |
| CRT | Cathode Ray Tube or picture tube |
| CSM | Customer Service Mode |
| CTI | Color Transient Improvement: manipulates steepness of chroma transients |
| CVBS | Composite Video Blanking and Synchronization |
| DAC | Digital to Analogue Converter |
| DBE | Dynamic Bass Enhancement: extra low frequency amplification |
| DBX | Dynamic Bass Expander |
| D/K | Monochrome TV system. Sound carrier distance is 6.5 MHz |
| DFU | Direction For Use: description for the end user |
| DNR | Dynamic Noise Reduction |
| DSP | Digital Signal Processing |

| | |
|-----------------|---|
| DST | Dealer Service Tool: special remote control designed for dealers to enter e.g. service mode |
| DVD | Digital Versatile Disc |
| EEPROM | Electrically Erasable and Programmable Read Only Memory |
| EHT | Extra High Tension |
| EHT-INFORMATION | Extra High Tension information |
| EU | Europe |
| EW | East West, related to horizontal deflection of the set |
| EXT | External (source), entering the set via SCART or Cinch |
| FBL | Fast Blanking: DC signal accompanying RGB signals |
| FILAMENT | Filament of CRT |
| FLASH | Flash memory |
| FM | Field Memory |
| FM | Frequency Modulation |
| HA | Horizontal Acquisition: horizontal sync pulse coming out of the HIP |
| HFB | Horizontal Flyback Pulse: horizontal sync pulse from large signal deflection |
| HP | Headphone |
| Hue | Color phase control for NTSC (not the same as 'Tint') |

| | |
|------------|---|
| I | Monochrome TV system. Sound carrier distance is 6.0 MHz |
| I2C | Integrated IC bus |
| IF | Intermediate Frequency |
| IIC | Integrated IC bus |
| Interlaced | Scan mode where two fields are used to form one frame. Each field contains half the number of the total amount of lines. The fields are written in 'pairs', causing line flicker. |
| ITV | Institutional TV |
| LATAM | Latin America |
| LED | Light Emitting Diode |
| L/L' | Monochrome TV system. Sound carrier distance is 6.5 MHz. L' is Band I, L is all bands except for Band I |
| LNA | Low Noise Amplifier |
| LS | Large Screen |
| LS | Loudspeaker |
| LSP | Large signal panel |
| M/N | Monochrome TV system. Sound carrier distance is 4.5 MHz |
| MSP | Multistandard Sound Processor: ITT sound decoder |
| MUTE | Mute-Line |

| | |
|------------------|---|
| NC | Not Connected |
| NICAM | Near Instantaneous Compounded Audio Multiplexing. This is a digital sound system, mainly used in Europe. |
| NTSC | National Television Standard Committee. Color system mainly used in North America and Japan. Color carrier NTSC M/N = 3.579545 MHz, NTSC 4.43 = 4.433619 MHz (this is a VCR norm, it is not transmitted off-air) |
| NVM | Non Volatile Memory: IC containing TV related data e.g. alignments |
| OB | Option Byte |
| OC | Open Circuit |
| OSD | On Screen Display |
| PAL | Phase Alternating Line. Color system mainly used in West Europe (color carrier = 4.433619 MHz) and South America (color carrier PAL M = 3.575612 MHz and PAL N = 3.582056 MHz) |
| PCB | Printed Circuit board |
| PIP | Picture In Picture |
| PLL | Phase Locked Loop. Used for e.g. FST tuning systems. The customer can give directly the desired frequency |
| POR | Power-On Reset |
| Progressive Scan | Scan mode where all scan lines are displayed in one frame at the same time, creating a double vertical resolution. |

| | |
|--------|---|
| PTP | Picture Tube Panel (or CRT-panel) |
| RAM | Random Access Memory |
| RC | Remote Control handset |
| RC5 | Remote Control system 5, signal from the remote control receiver |
| RGB | Red Green Blue |
| ROM | Read Only Memory |
| SAM | Service Alignment Mode |
| SAP | Second Audio Program |
| SC | Sandcastle: pulse derived from sync signals |
| S/C | Short Circuit |
| SCAVEM | Scan Velocity Modulation |
| SCL | Serial Clock |
| SDA | Serial Data |
| SDM | Service Default Mode |
| SECAM | SEquence Couleur Avec Memoire. Color system mainly used in France and East Europe. Color carriers = 4.406250 MHz and 4.250000 MHz |
| SIF | Sound Intermediate Frequency |
| SS | Small Screen |
| STBY | Standby |

| | |
|---------|---|
| SVHS | Super Video Home System |
| SW | Software |
| THD | Total Harmonic Distortion |
| TXT | Teletext |
| uP | Microprocessor |
| UOC | Ultimate One Chip |
| VA | Vertical Acquisition |
| VBAT | Main supply voltage for the deflection stage (mostly 141 V) |
| V-chip | Violence Chip |
| VCR | Video Cassette Recorder |
| WYSIWYR | What You See Is What You Record: record selection that follows main picture and sound |
| XTAL | Quartz crystal |
| YC | Luminance (Y) and Chrominance (C) signal |

IC Data Sheets

In this paragraph, the internal block diagrams and pinning are given of ICs that are drawn as a 'black box' in the electrical diagrams (with the exception of 'memory' and 'logic' ICs).

This is not applicable for this manual (all ICs are drawn with internal block diagrams)

20DV693R01 - Manual no. 7638

Main Chassis Parts

| Main Chassis Parts | | | | | | | |
|--------------------|---|------|-----|-------|--------|---|--------------------------------|
| | Socket Fuse. | 2422 | 088 | 00271 | 2243 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 32220 |
| 0127 | NTC Holder. | 3139 | 120 | 10151 | 2244 | Cap, 100n, 5%, 63v, Metalized Polyester | 2222 370 76104 |
| 0130 | Bead, Ferrite, 100MHz. | 2422 | 549 | 45808 | 2245 | Cap, 220n, +80/-20%, 16v, Ceramic. . . | 3198 017 42240 |
| 0136 | IC-Spring. | 3104 | 301 | 22081 | 2247 | Cap, 1000u, 20%, 16v, Electrolytic. . . | 3198 026 21020 |
| 0137 | Spring. | 3139 | 121 | 24583 | 2248 | Cap, 22n, 10%, 25v, Ceramic. | 3198 017 32230 |
| 0138 | IC-Spring. | 3104 | 301 | 22081 | 2249 | Cap, 22n, 10%, 25v, Ceramic. | 3198 017 32230 |
| 0139 | Spring for Bracket. | 3122 | 121 | 24786 | 2250 | Cap, 2u2, 20%, 50v, Electrolytic. . . | 3198 025 52280 |
| 0141 | IC-Spring. | 3104 | 301 | 22081 | 2252 | Cap, 1n, 5%, 25v, Ceramic. | 3198 016 31020 |
| 0152 | Cable, DIPMate, 6 Pin. | 3139 | 121 | 08841 | 2253 | Cap, 1n, 5%, 25v, Ceramic. | 3198 016 31020 |
| 0153 | Cable, DIPMate, 5 Pin, 480mm. | 3139 | 121 | 07951 | 2254 | Res, Zero ohm, "Chip" Jumper. | 3198 021 90020 |
| 0211 | 2 Pin Connector. | 2422 | 025 | 16374 | 2330 | Cap, 100n, 10%, 250v, Metalized Polyest | er. 2222 368 90177 |
| 0212 | 2 Pin Connector. | 2422 | 025 | 16375 | 2331 | Cap, 10n, +80/-20% 1000v, Ceramic. . . | 2020 558 90445 |
| 0214 | 5 Pin Connector. | 2422 | 025 | 12481 | 2340 | Cap, 10u, 20%, 250v, Electrolytic. . . | 2020 012 93495 |
| 0217 | 3 Pin Connector. | 2412 | 020 | 00725 | 2341 | Cap, 3n3, 10%, 500v, Ceramic. | 3198 019 43320 |
| 0219 | 6 Pin Connector. | 2422 | 025 | 12482 | 2342 | Cap, 560p, 5%, 50v, Ceramic. | 3198 016 05610 |
| 0220 | 5 Pin Connector. | 2422 | 025 | 04853 | 2343 | Cap, 2n2, 10%, 2000v, Ceramic. | 2020 558 90559 |
| 0221 | 2 Pin Connector. | 2422 | 025 | 15503 | 2344 | Cap, 100n, +80/-20%, 25v, Ceramic. . . | 3198 023 21040 |
| 0222 | 2 Pin Connector. | 2422 | 025 | 10646 | 2345 | Cap, 10n, +80/-20%, 1000v, Ceramic. . . | 2020 558 90445 |
| 0223 | A/V Jack. | 2422 | 026 | 05236 | 2405 | Cap, 220u, 20%, 25v, Electrolytic. . . | 3198 025 32210 |
| 0225 | SVHS Jack. | 2422 | 026 | 04926 | 2441 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0229 | 7 Pin Connector. | 2422 | 025 | 11244 | 2443 | Cap, 47n, +80/-20%, 50v, Ceramic. . . | 3198 017 24730 |
| 0239 | 3 Pin Connector. | 2422 | 025 | 16382 | 2444 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0240 | 4 Pin Connector. | 2422 | 025 | 12479 | 2450 | Cap, 47u, 20%, 160v, Electrolytic. . . | 2022 031 00103 |
| 0243 | 6 Pin Connector. | 2422 | 025 | 04854 | 2455 | Cap, 47u, 20%, 25v, Electrolytic. . . | 3198 025 34790 |
| 0244 | 5 Pin Connector. | 2422 | 025 | 04853 | 2457 | Cap, 270n, 5%, 250v, Metalized Polyprop | ylene. 2222 479 90016 |
| 0245 | 6 Pin Connector. | 2422 | 025 | 04854 | 2458 | Cap, 2u2, 20%, 100v, Electrolytic. . . | 2022 031 00138 |
| 0246 | 5 Pin Connector. | 2422 | 025 | 12481 | 2459 | Cap, 680p, 10%, 500v, Ceramic. | 3198 019 46810 |
| 0251 | 4 Pin Connector. | 2422 | 025 | 15847 | 2460 | Cap, 100p, 5%, 50v, Ceramic. | 3198 016 01010 |
| S 0254 | 9 Pin CRT Socket. | 2422 | 500 | 80076 | 2463 | Cap, 680p, 10%, 2000v, Ceramic. | 2020 558 90485 |
| 0267 | 3 Pin Connector. | 2412 | 020 | 00725 | 2465 | Cap, 9n1, 5%, 1600v, Polypropylene. . . | 2222 375 90153 |
| 0269 | Jack. | 2422 | 026 | 05182 | 2467 | Cap, 68n, 10%, 250v, Polyester. | 2222 347 90234 |
| S 1000 | Tuner, V+U, PLL. | 2422 | 542 | 90108 | 2468 | Cap, 33n, 10%, 400v, Polyester. | 2222 347 90227 |
| 1002 | SAW Filter, 45.75MHz. | 2422 | 549 | 44518 | 2471 | Cap, 100n, 10%, 50v, Polyester. | 3198 014 01040 |
| 1200 | Filter, Ceramic, 4MHz5. | 2422 | 549 | 40807 | 2472 | Cap, 150n, 10%, 63v, Metalized Polyeste | 2222 365 75154 |
| S 1500 | Fuse, 4A, 250V, IEC. | 2422 | 086 | 10914 | 2473 | Cap, 100n, 10%, 63v, Metalized Polyeste | 2222 365 75104 |
| S 1515 | Relay, 5 Amp, 12V. | 2422 | 132 | 07467 | 2474 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 1660 | Crystal, 12MHz000. | 2422 | 543 | 01203 | 2475 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 1810 | 6 Pin Connector. | 2422 | 025 | 15849 | 2476 | Cap, 4n7, 10%, 50v, Ceramic. | 3198 017 04720 |
| 1831 | Crystal, Resonator, 18MHz432, 12 Pin, H | 2422 | 543 | 00842 | 2480 | Cap, 47u, 20%, 25v, Electrolytic. | 2038 035 13301 |
| | C49/U A. | 2422 | 025 | 00842 | 2481 | Cap, 470p, 10%, 500v, Ceramic. | 3198 019 44710 |
| 2004 | Cap, 47n, 10%, 50v, Ceramic. | 3198 | 024 | 44730 | 2482 | Cap, 68n, 10%, 250v, Polyester. | 2222 347 90234 |
| 2005 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 | 025 | 51090 | 2485 | Cap, 4u7, 20%, 250v, Electrolytic. | 2022 031 00137 |
| 2006 | Cap, 470u, 20%, 16v, Electrolytic. | 3198 | 025 | 24710 | 2486 | Cap, 470u, 20%, 16v, Electrolytic. | 2022 031 00139 |
| 2007 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 | 023 | 41040 | 2487 | Cap, 47u, 20%, 50v, Electrolytic. | 2038 035 13508 |
| 2008 | Cap, 100u, 20%, 25v, Electrolytic. | 3198 | 025 | 31010 | 2488 | Cap, 1000u, 20%, 16v, Electrolytic. | 2022 031 00144 |
| 2009 | Cap, 22n, 10%, 25v, Ceramic. | 3198 | 017 | 32230 | 2489 | Cap, 470u, 20%, 16v, Electrolytic. | 2022 031 00139 |
| 2101 | Cap, 470n, +80/-20%, 16v, Ceramic. | 3198 | 017 | 24740 | 2491 | Cap, 1n, 10%, 500v, Ceramic. | 3198 019 41020 |
| 2102 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 | 32290 | 2500 | Cap, 470n, 20%, 275v, Metalized Polypro | pylene. 2222 336 29148 |
| 2103 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 | 33310 | 2501 | Cap, 2n2, 10%, 1000v, Ceramic. | 3198 019 52220 |
| 2104 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 | 33310 | 2502 | Cap, 2n2, 10%, 1000v, Ceramic. | 3198 019 52220 |
| 2105 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 | 025 | 51090 | 2503 | Cap, 470u, 20%, 200v, Electrolytic. | 2020 024 90626 |
| 2106 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 | 025 | 51090 | 2505 | Cap, 2n2, 10%, 1000v, Ceramic. | 3198 019 52220 |
| 2111 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 | 32290 | 2507 | Cap, 470p, 10%, 50v, Ceramic. | 3198 017 04710 |
| 2112 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 | 32290 | 2508 | Cap, 470p, 10%, 1000v, Ceramic. | 3198 019 64710 |
| 2113 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 | 32290 | S 2515 | Cap, 1n5, 20%, 50v, Ceramic. | 2020 554 90128 |
| 2121 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 | 32290 | S 2516 | Cap, 470p, 20%, 50v, Ceramic. | 2020 554 90148 |

|--------------------|---|---------------------------------|--------------------|---|--------------------------------|
| 0211 | 2 Pin Connector. | 2422 025 16374 | 2330 | Cap, 100n, 10%, 250v, Metalized Polyest | er. 2222 368 90177 |
| 0212 | 2 Pin Connector. | 2422 025 16375 | 2331 | Cap, 10n, +80/-20% 1000v, Ceramic. | 2020 558 90445 |
| 0214 | 5 Pin Connector. | 2422 025 12481 | 2340 | Cap, 10u, 20%, 250v, Electrolytic. | 2020 012 93495 |
| 0217 | 3 Pin Connector. | 2412 020 00725 | 2341 | Cap, 3n3, 10%, 500v, Ceramic. | 3198 019 43320 |
| 0219 | 6 Pin Connector. | 2422 025 12482 | 2342 | Cap, 560p, 5%, 50v, Ceramic. | 3198 016 05610 |
| 0220 | 5 Pin Connector. | 2422 025 04853 | 2343 | Cap, 2n2, 10%, 2000v, Ceramic. | 2020 558 90559 |
| 0221 | 2 Pin Connector. | 2422 025 15503 | 2344 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 023 21040 |
| 0222 | 2 Pin Connector. | 2422 025 10646 | 2345 | Cap, 10n, +80/-20%, 1000v, Ceramic. | 2020 558 90445 |
| 0223 | A/V Jack. | 2422 026 05236 | 2401 | Cap, 2u2, 20%, 50v, Electrolytic. | 2020 021 90552 |
| 0225 | SVHS Jack. | 2422 026 04926 | 2402 | Cap, 470p, 10%, 500v, Ceramic. | 3198 019 44710 |
| 0229 | 7 Pin Connector. | 2422 025 11244 | 2404 | Cap, 47u, 20%, 50v, Electrolytic. | 3198 025 54790 |
| 0239 | 3 Pin Connector. | 2422 025 16382 | 2405 | Cap, 220u, 20%, 25v, Electrolytic. | 3198 025 32210 |
| 0240 | 4 Pin Connector. | 2422 025 12479 | 2415 | Cap, 330p, 5%, 50v, Ceramic. | 3198 016 03310 |
| 0243 | 6 Pin Connector. | 2422 025 04854 | 2441 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0244 | 5 Pin Connector. | 2422 025 04853 | 2443 | Cap, 47n, +80/-20%, 50v, Ceramic. | 3198 017 24730 |
| 0245 | 6 Pin Connector. | 2422 025 04854 | 2444 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0246 | 5 Pin Connector. | 2422 025 12481 | 2450 | Cap, 47u, 20%, 160v, Electrolytic. | 2020 021 91139 |
| 0251 | 4 Pin Connector. | 2422 025 15847 | 2451 | Cap, 22n, 10%, 50v, Polyester. | 3198 014 02230 |
| S 0254 | 9 Pin CRT Socket. | 2422 500 80076 | 2452 | Cap, 180p, 5%, 50v, Ceramic. | 3198 016 01810 |
| 0267 | 3 Pin Connector. | 2412 020 00725 | 2455 | Cap, 47u, 20%, 25v, Electrolytic. | 3198 025 34790 |
| 0269 | Jack. | 2422 026 05182 | 2457 | Cap, 360n, 5%, 250v, Metalized Polyprop | ylene. 2022 333 00163 |
| S 1000 | Tuner, V+U, PLL. | 2422 542 90108 | 2458 | Cap, 2u2, 20%, 100v, Electrolytic. | 2020 021 91331 |
| 1002 | SAW Filter, 45.75MHz. | 2422 549 44518 | 2459 | Cap, 680p, 10%, 500v, Ceramic. | 3198 019 46810 |
| 1200 | Filter, Ceramic, 4MHz5. | 2422 549 40807 | 2460 | Cap, 100p, 5%, 50v, Ceramic. | 3198 016 01010 |
| S 1500 | Fuse, 4A, 250V, IEC. | 2422 086 10914 | S 2463 | Cap, 1n5, 10%, 2000v, Ceramic. | 2020 558 90489 |
| S 1515 | Relay, 5 Amp, 12V. | 2422 132 07444 | 2464 | Cap, 2u2, 5%, 160v, Metalized Polypropy | lene. 2222 479 90042 |
| 1660 | Crystal, 12MHz000. | 2422 543 01203 | S 2465 | Cap, 15n, 5%, 1600v, Polypropylene. | 2020 301 90255 |
| 1810 | 6 Pin Connector. | 2422 025 15849 | 2466 | Cap, 15n, 10%, 400v, Polyester. | 2222 347 90219 |
| 1831 | Crystal, Resonator, 18MHz432, 12 Pin, H | C49/U A. 2422 543 00842 | 2468 | Cap, 27n, 10%, 400v, Polyester. | 2222 347 90232 |
| 2004 | Cap, 47n, 10%, 50v, Ceramic. | 3198 024 44730 | 2471 | Cap, 100n, 10%, 50v, Polyester. | 3198 014 01040 |
| 2005 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 025 51090 | 2472 | Cap, 150n, 10%, 63v, Metalized Polyeste | 2222 365 75154 |
| 2006 | Cap, 470u, 20%, 16v, Electrolytic. | 3198 025 24710 | 2473 | Cap, 100n, 10%, 63v, Metalized Polyeste | 2222 365 75104 |
| 2007 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 023 41040 | 2474 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 2008 | Cap, 100u, 20%, 25v, Electrolytic. | 3198 025 31010 | 2475 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 2009 | Cap, 22n, 10%, 25v, Ceramic. | 3198 017 32230 | 2476 | Cap, 4n7, 10%, 50v, Ceramic. | 3198 017 04720 |
| 2101 | Cap, 470n, +80/-20%, 16v, Ceramic. | 3198 017 24740 | 2480 | Cap, 47u, 20%, 25v, Electrolytic. | 2020 021 90586 |
| 2102 | Cap, 22p, 5%, 50v, Ceramic. | 3198 016 32290 | 2481 | Cap, 470p, 10%, 500v, Ceramic. | 3198 019 44710 |
| 2103 | Cap, 330p, 10%, 50v, Ceramic. | 3198 017 33310 | 2482 | Cap, 120n, 5%, 250v, Metalized Polyprop | ylene. 2222 479 90051 |

Main Chassis Parts

| Main Chassis Parts | | | | | | | |
|--------------------|---|------|-----------|--------|--|------|-----------|
| | Main Chassis Parts | | | | | | |
| 0211 | 2 Pin Connector. | 2422 | 025 16269 | 2254 | Res, Zero ohm, "Chip" Jumper | 3198 | 021 90020 |
| 0212 | 2 Pin Connector. | 2422 | 025 16375 | 2330 | Cap, 100n, 10%, 250v, Metalized Polyest | | |
| 0218 | A/V Jack | 2422 | 026 04742 | | er. | 2222 | 368 90177 |
| 0220 | 5 Pin Connector. | 2422 | 025 04853 | 2331 | Cap, 10n, +80/-20% 1000v, Ceramic. | 2020 | 558 90445 |
| 0221 | 2 Pin Connector. | 2422 | 025 15503 | 2340 | Cap, 10u, 20%, 250v, Electrolytic. | 2020 | 012 93495 |
| 0222 | 2 Pin Connector. | 2422 | 025 10646 | 2341 | Cap, 3n3, 10%, 500v, Ceramic. | 3198 | 019 43320 |
| 0223 | A/V Jack | 2422 | 026 05236 | 2342 | Cap, 560p, 5%, 50v, Ceramic. | 3198 | 016 05610 |
| 0225 | SVHS Jack. | 2422 | 026 04926 | 2343 | Cap, 2n2, 10%, 2000v, Ceramic. | 2020 | 558 90559 |
| 0240 | 7 Pin Connector. | 2422 | 025 11244 | 2344 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 | 023 21040 |
| 0243 | 6 Pin Connector. | 2422 | 025 04854 | 2345 | Cap, 10n, +80/-20%, 1000v, Ceramic. | 2020 | 558 90445 |
| 0244 | 5 Pin Connector. | 2422 | 025 04853 | 2405 | Cap, 220u, 20%, 25v, Electrolytic. | 3198 | 025 32210 |
| 0245 | 6 Pin Connector. | 2422 | 025 04854 | 2415 | Cap, 330p, 5%, 50v, Ceramic. | 3198 | 016 03310 |
| 0251 | 3 Pin Connector. | 2412 | 020 00725 | 2441 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 | 025 51080 |
| S 0254 | 9 Pin CRT Socket | 2422 | 500 80076 | 2443 | Cap, 47n, +80/-20%, 50v, Ceramic. | 3198 | 017 24730 |
| 0259 | 5 Pin Connector. | 2422 | 025 15848 | 2444 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 | 025 51080 |
| 0262 | 3 Pin Connector. | 2422 | 025 16937 | 2450 | Cap, 47u, 20%, 160v, Electrolytic. | 2020 | 021 91139 |
| 0267 | 3 Pin Connector. | 2412 | 020 00725 | 2451 | Cap, 15n, 10%, 50v, Polyester. | 3198 | 014 01530 |
| 0280 | 4 Pin Connector. | 2422 | 025 12479 | 2455 | Cap, 47u, 20%, 25v, Electrolytic. | 3198 | 025 34790 |
| S 1000 | Tuner, V+U, PLL | 2422 | 542 90108 | 2457 | Cap, 470n, 5%, 250v, Metalized Polyprop | | |
| 1002 | SAW Filter, 45.75MHz | 2422 | 549 44518 | | ylene. | 2022 | 333 00086 |
| 1200 | Filter, Ceramic, 4MHz5 | 2422 | 549 40807 | 2458 | Cap, 2u2, 20%, 100v, Electrolytic. | 2020 | 021 91331 |
| S 1500 | Fuse, 4A, 250V, IEC. | 2422 | 086 10914 | 2459 | Cap, 680p, 10%, 500v, Ceramic. | 3198 | 019 46810 |
| S 1515 | Relay, 5 Amp, 12V. | 2422 | 132 07444 | 2460 | Cap, 100p, 5%, 50v, Ceramic. | 3198 | 016 01010 |
| 1600 | Tact Switch. | 2422 | 128 02742 | 2462 | Cap, 330n, 10%, 250v, MPP. | 2022 | 333 00084 |
| 1601 | Tact Switch. | 2422 | 128 02742 | 2463 | Cap, 1nf, 10%, 2000v, Ceramic Only with | | |
| 1602 | Tact Switch. | 2422 | 128 02742 | | 5445 (JF0501-21835) Layer Wound. | 2020 | 558 90487 |
| 1603 | Tact Switch. | 2422 | 128 02742 | 2463 | Cap, 680p, 10%, 2000v, Ceramic. | 2020 | 558 90485 |
| 1606 | Tact Switch. | 2422 | 128 02742 | S 2465 | Cap, 11n, 5%, 1600v, Polypropylene | 2020 | 301 90251 |
| 1660 | Crystal, 12MHz000 | 2422 | 543 01203 | S 2465 | Cap, 12n, 5%, 1600v, Polypropylene Only | | |
| 1861 | Ceramic Resonator, 514KHz5, CSB503F58. | 2422 | 540 98344 | | with 5445 (JF0501-21835) Layer Wound | 2222 | 375 90156 |
| 2004 | Cap, 47n, 10%, 50v, Ceramic. | 3198 | 024 44730 | 2471 | Cap, 100n, 10%, 50v, Polyester. | 3198 | 014 01040 |
| 2005 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 | 025 51090 | 2472 | Cap, 150n, 10%, 63v, Metalized Polyeste | 2222 | 365 75154 |
| 2006 | Cap, 470u, 20%, 16v, Electrolytic. | 3198 | 025 24710 | 2473 | Cap, 100n, 10%, 63v, Metalized Polyeste | 2222 | 365 75104 |
| 2007 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 | 023 41040 | 2474 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 | 017 02220 |
| 2008 | Cap, 100u, 20%, 25v, Electrolytic. | 3198 | 025 31010 | 2475 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 | 017 02220 |
| 2009 | Cap, 22n, 10%, 25v, Ceramic. | 3198 | 017 32230 | 2476 | Cap, 4n7, 10%, 50v, Ceramic. | 3198 | 017 04720 |
| 2101 | Cap, 470n, +80/-20%, 16v, Ceramic. | 3198 | 017 24740 | 2480 | Cap, 47u, 20%, 25v, Electrolytic. | 2020 | 021 90586 |
| 2102 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | 2481 | Cap, 470p, 10%, 500v, Ceramic. | 3198 | 019 44710 |
| 2103 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 33310 | 2482 | Cap, 68n, 10%, 250v, Polyester. | 2222 | 347 90234 |
| 2104 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 33310 | 2485 | Cap, 4u7, 20%, 250v, Electrolytic. | 2020 | 021 90856 |
| 2105 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 | 025 51090 | 2486 | Cap, 470u, 20%, 16v, Electrolytic. | 2020 | 021 91577 |
| 2106 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 | 025 51090 | 2487 | Cap, 47u, 20%, 50v, Electrolytic. | 2020 | 021 90854 |
| 2111 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | 2488 | Cap, 1000u, 20%, 16v, Electrolytic. | 2020 | 021 91049 |
| 2112 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | 2489 | Cap, 470u, 20%, 16v, Electrolytic. | 2020 | 021 91577 |
| 2113 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | 2491 | Cap, 1n, 10%, 500v, Ceramic. | 3198 | 019 41020 |
| 2123 | Res, Zero ohm, "Chip" Jumper | 3198 | 021 90020 | S 2500 | Cap, 470n, 20%, 275v, Metalized Polypro | | |
| 2125 | Res, Zero ohm, "Chip" Jumper | 3198 | 021 90020 | | pylene | 2022 | 330 00018 |
| 2131 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 33310 | 2501 | Cap, 2n2, 10%, 1000v, Ceramic. | 3198 | 019 52220 |
| 2132 | Cap, 2u2, +80/-20%, 10v, Ceramic. | 3198 | 017 22250 | 2502 | Cap, 2n2, 10%, 1000v, Ceramic. | 3198 | 019 52220 |
| 2133 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 33310 | 2503 | Cap, 470u, 20%, 200v, Electrolytic. | 2020 | 024 90647 |
| 2134 | Cap, 2u2, +80/-20%, 10v, Ceramic. | 3198 | 017 22250 | 2505 | Cap, 2n2, 10%, 1000v, Ceramic. | 3198 | 019 52220 |
| 2135 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | 2507 | Cap, 470p, 10%, 50v, Ceramic. | 3198 | 017 04710 |
| 2136 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | 2508 | Cap, 470p, 10%, 1000v, Ceramic. | 3198 | 019 64710 |
| 2181 | Cap, 22p, 5%, 50v, Ceramic. | 3198 | 016 32290 | S 2515 | Cap, 1n5, 20%, 50v, Ceramic. | 2020 | 554 90172 |
| 2182 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 33310 | 2520 | Cap, 10n, 10%, 50v, Ceramic. | 3198 | 017 01030 |
| 2183 | Cap, 330p, 10%, 50v, Ceramic. | 3198 | 017 33310 | 2521 | Cap, 22u, 20%, 50v, Electrolytic. | 3198 | 025 52290 |

| | Main Chassis Parts | | | | |
| 0211 | 2 Pin Connector. | 2422 025 16269 | 2331 | Cap, 10n, +80/-20% 1000v, Ceramic. | 2020 558 90445 |
| 0212 | 2 Pin Connector. | 2422 025 16375 | 2340 | Cap, 10u, 20%, 250v, Electrolytic. | 2020 012 93495 |
| 0219 | 6 Pin Connector. | 2422 025 12482 | 2341 | Cap, 3n3, 10%, 500v, Ceramic. | 3198 019 43320 |
| 0220 | 5 Pin Connector. | 2422 025 04853 | 2342 | Cap, 560p, 5%, 50v, Ceramic. | 3198 016 05610 |
| 0221 | 2 Pin Connector. | 2422 025 15503 | 2343 | Cap, 2n2, 10%, 2000v, Ceramic. | 2020 558 90559 |
| 0222 | 2 Pin Connector. | 2422 025 10646 | 2344 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 023 21040 |
| 0223 | A/V Jack. | 2422 026 05236 | 2345 | Cap, 10n, +80/-20%, 1000v, Ceramic. | 2020 558 90445 |
| 0225 | SVHS Jack. | 2422 026 04926 | 2405 | Cap, 220u, 20%, 25v, Electrolytic. | 3198 025 32210 |
| 0243 | 6 Pin Connector. | 2422 025 04854 | 2415 | Cap, 330p, 5%, 50v, Ceramic. | 3198 016 03310 |
| 0244 | 5 Pin Connector. | 2422 025 04853 | 2441 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0245 | 6 Pin Connector. | 2422 025 04854 | 2443 | Cap, 47n, +80/-20%, 50v, Ceramic. | 3198 017 24730 |
| 0246 | 5 Pin Connector. | 2422 025 12481 | 2444 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| S 0254 | 9 Pin CRT Socket. | 2422 500 80076 | 2450 | Cap, 47u, 20%, 160v, Electrolytic. | 2020 021 91139 |
| 0267 | 3 Pin Connector. | 2412 020 00725 | 2451 | Cap, 15n, 10%, 50v, Polyester. | 3198 014 01530 |
| 0269 | Jack. | 2422 026 05182 | 2455 | Cap, 47u, 20%, 25v, Electrolytic. | 3198 025 34790 |
| S 1000 | Tuner, V+U PLL. | 2422 542 90141 | 2457 | Cap, 470n, 5%, 250v, Metalized Polypropylene. | 2022 333 00086 |
| 1002 | SAW Filter, 45.75MHz. | 2422 549 44518 | 2458 | Cap, 2u2, 20%, 100v, Electrolytic. | 2020 021 91331 |
| 1200 | Filter, Ceramic, 4MHz5. | 2422 549 40807 | 2459 | Cap, 680p, 10%, 500v, Ceramic. | 3198 019 46810 |
| S 1500 | Fuse, 4A, 250V, IEC. | 2422 086 10914 | 2460 | Cap, 100p, 5%, 50v, Ceramic. | 3198 016 01010 |
| S 1515 | Relay, 5 Amp, 12V. | 2422 132 07444 | 2462 | Cap, 330n, 10%, 250v, MPP. | 2022 333 00084 |
| 1600 | Tact Switch. | 2422 128 02742 | 2463 | Cap, 1n, 10%, 2000v, Ceramic Only with 5445 (JF0501-21835) Layer Wound. | 2020 558 90487 |
| 1601 | Tact Switch. | 2422 128 02742 | 2463 | Cap, 680p, 10%, 2000v, Ceramic. | 2020 558 90485 |
| 1602 | Tact Switch. | 2422 128 02742 | S 2465 | Cap, 11n, 5%, 1600v, Polypropylene. | 2020 301 90251 |
| 1603 | Tact Switch. | 2422 128 02742 | S 2465 | Cap, 12n, 5%, 1600v, Polypropylene Only with 5445 (JF0501-21835) Layer Wound. | 2222 375 90156 |
| 1606 | Tact Switch. | 2422 128 02742 | 2471 | Cap, 100n, 10%, 50v, Polyester. | 3198 014 01040 |
| 1660 | Crystal, 12MHz000. | 2422 543 01203 | 2472 | Cap, 150n, 10%, 63v, Metalized Polyester. | 2222 365 75154 |
| 1810 | 6 Pin Connector. | 2422 025 16607 | 2473 | Cap, 100n, 10%, 63v, Metalized Polyester. | 2222 365 75104 |
| 1831 | Crystal, Resonator, 18MHz432, 12 Pin, H C49/U A. | 2422 543 00842 | 2474 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 2004 | Cap, 47n, 10%, 50v, Ceramic. | 3198 024 44730 | 2475 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 2005 | Cap, 10u, 20%, 50v, Electrolytic. | 3198 025 51090 | 2476 | Cap, 4n7, 10%, 50v, Ceramic. | 3198 017 04720 |
| 2006 | Cap, 470u, 20%, 16v, Electrolytic. | 3198 025 24710 | 2480 | Cap, 47u, 20%, 25v, Electrolytic. | 2020 021 90586 |
| 2007 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 023 41040 | 2481 | Cap, 470p, 10%, 500v, Ceramic. | 3198 019 44710 |
| 2008 | Cap, 100u, 20%, 25v, Electrolytic. | 3198 025 31010 | 2482 | Cap, 68n, 10%, 250v, Polyester. | 2222 347 90234 |
| 2009 | Cap, 22n, 10%, 25v, Ceramic. | 3198 017 32230 | 2485 | Cap, 4u7, 20%, 250v, Electrolytic. | 2020 021 90856 |
| 2101 | Cap, 470n, +80/-20%, 16v, Ceramic. | 3198 017 24740 | 2486 | Cap, 470u, 20%, 16v, Electrolytic. | 2020 021 91577 |
| 2102 | Cap, 22p, 5%, 50v, Ceramic. | 3198 016 32290 | 2487 | Cap, 47u, 20%, 50v, Electrolytic. | 2020 021 90854 |
| 2103 | Cap, 330p, 10%, 50v, Ceramic. | 3198 017 33310 | 2488 | Cap, 1000u, 20%, 16v, Electrolytic. | 2020 021 91049 |

Main Chassis Parts

| Main Chassis Parts | | | Main Chassis Parts | | |
|--------------------|--|----------------|--------------------|--|----------------|
| 0211 | 2 Pin Connector. | 2422 025 16374 | 2341 | Cap, 3n3, 10%, 500v, Ceramic | 3198 019 43320 |
| 0212 | 2 Pin Connector. | 2422 025 16375 | 2342 | Cap, 560p, 5%, 50v, Ceramic. | 3198 016 05610 |
| 0214 | 5 Pin Connector. | 2422 025 12481 | 2343 | Cap, 2n2, 10%, 2000v, Ceramic. | 2020 558 90559 |
| 0219 | 6 Pin Connector. | 2422 025 12482 | 2344 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 023 21040 |
| 0220 | 5 Pin Connector. | 2422 025 04853 | 2345 | Cap, 10n, +80/-20%, 1000v, Ceramic | 2020 558 90445 |
| 0221 | 2 Pin Connector. | 2422 025 15503 | 2401 | Cap, 2u2, 20%, 50v, Electrolytic | 2020 021 90552 |
| 0222 | 2 Pin Connector. | 2422 025 10646 | 2402 | Cap, 470p, 10%, 500v, Ceramic. | 3198 019 44710 |
| 0223 | A/V Jack | 2422 026 05236 | 2404 | Cap, 47u, 20%, 50v, Electrolytic | 3198 025 54790 |
| 0225 | SVHS Jack. | 2422 026 04926 | 2405 | Cap, 220u, 20%, 25v, Electrolytic. | 3198 025 32210 |
| 0239 | 3 Pin Connector. | 2422 025 16382 | 2415 | Cap, 330p, 5%, 50v, Ceramic. | 3198 016 03310 |
| 0243 | 6 Pin Connector. | 2422 025 04854 | 2441 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0244 | 5 Pin Connector. | 2422 025 04853 | 2443 | Cap, 47n, +80/-20%, 50v, Ceramic | 3198 017 24730 |
| 0245 | 6 Pin Connector. | 2422 025 04854 | 2444 | Cap, 1u, 20%, 50v, Electrolytic. | 3198 025 51080 |
| 0246 | 5 Pin Connector. | 2422 025 12481 | 2450 | Cap, 47u, 20%, 160v, Electrolytic. | 2020 021 91139 |
| S 0254 | 9 Pin CRT Socket | 2422 500 80076 | 2451 | Cap, 22n, 10%, 50v, Polyester. | 3198 014 02230 |
| 0267 | 3 Pin Connector. | 2412 020 00725 | 2452 | Cap, 180p, 5%, 50v, Ceramic. | 3198 016 01810 |
| 0269 | Jack | 2422 026 05182 | 2455 | Cap, 47u, 20%, 25v, Electrolytic | 3198 025 34790 |
| S 1000 | Tuner, V+U PLL | 2422 542 90141 | 2457 | Cap, 360n, 5%, 250v, Metalized Polypropylene. | 2022 333 00163 |
| 1002 | SAW Filter, 45.75MHz | 2422 549 44518 | 2458 | Cap, 2u2, 20%, 100v, Electrolytic. | 2020 021 91331 |
| 1200 | Filter, Ceramic, 4MHz5 | 2422 549 40807 | 2459 | Cap, 680p, 10%, 500v, Ceramic. | 3198 019 46810 |
| S 1500 | Fuse, 4A, 250V, IEC. | 2422 086 10914 | 2460 | Cap, 100p, 5%, 50v, Ceramic. | 3198 016 01010 |
| S 1515 | Relay, 5 Amp, 12V. | 2422 132 07444 | S 2463 | Cap, 1n5, 10%, 2000v, Ceramic. | 2020 558 90489 |
| 1660 | Crystal, 12MHz000 | 2422 543 01203 | 2464 | Cap, 2u2, 5%, 160v, Metalized Polypropylene. | 2222 479 90042 |
| 1810 | 6 Pin Connector. | 2422 025 16607 | S 2465 | Cap, 15n, 5%, 1600v, Polypropylene | 2020 301 90255 |
| 1831 | Crystal, Resonator, 18MHz432, 12 Pin, H C49/U A. | 2422 543 00842 | 2466 | Cap, 15n, 10%, 400v, Polyester | 2222 347 90219 |
| 2004 | Cap, 47n, 10%, 50v, Ceramic. | 3198 024 44730 | 2468 | Cap, 27n, 10%, 400v, Polyester | 2222 347 90232 |
| 2005 | Cap, 10u, 20%, 50v, Electrolytic | 3198 025 51090 | 2471 | Cap, 100n, 10%, 50v, Polyester | 3198 014 01040 |
| 2006 | Cap, 470u, 20%, 16v, Electrolytic. | 3198 025 24710 | 2472 | Cap, 150n, 10%, 63v, Metalized Polyester. | 2222 365 75154 |
| 2007 | Cap, 100n, +80/-20%, 25v, Ceramic. | 3198 023 41040 | 2473 | Cap, 100n, 10%, 63v, Metalized Polyester. | 2222 365 75104 |
| 2008 | Cap, 100u, 20%, 25v, Electrolytic. | 3198 025 31010 | 2474 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 2009 | Cap, 22n, 10%, 25v, Ceramic. | 3198 017 32230 | 2475 | Cap, 2n2, 10%, 50v, Ceramic. | 3198 017 02220 |
| 2101 | Cap, 470n, +80/-20%, 16v, Ceramic. | 3198 017 24740 | 2476 | Cap, 4n7, 10%, 50v, Ceramic. | 3198 017 04720 |
| 2102 | Cap, 22p, 5%, 50v, Ceramic | 3198 016 32290 | 2480 | Cap, 47u, 20%, 25v, Electrolytic | 2020 021 90586 |
| 2103 | Cap, 330p, 10%, 50v, Ceramic | 3198 017 33310 | 2481 | Cap, 470p, 10%, 500v, Ceramic. | 3198 019 44710 |
| 2104 | Cap, 330p, 10%, 50v, Ceramic | 3198 017 33310 | 2482 | Cap, 120n, 5%, 250v, Metalized Polypropylene. | 2222 479 90051 |
| 2105 | Cap, 10u, 20%, 50v, Electrolytic | 3198 025 51090 | 2485 | Cap, 4u7, 20%, 250v, Electrolytic. | 2020 021 90856 |
